|----------|----------------------------------------------------------------------------------------|-----------|
| <b>1</b> | <b>Introduction to Reliability Centered Maintenance</b>                                | <b>1</b>  |
| 1.1      | Maintenance perspective                                                                | 1         |
| 1.2      | The history of maintenance                                                             | 2         |
| 1.3      | Generation of changes in maintenance                                                   | 3         |
| 1.4      | Evolution of maintenance processes                                                     | 4         |
| 1.5      | Definition of Maintenance and RCM                                                      | 6         |
| <b>2</b> | <b>Why RCM for my Organization</b>                                                     | <b>13</b> |
| 2.1      | Why RCM is different?                                                                  | 13        |
| 2.2      | The new paradigms in maintaining assets                                                | 14        |
| 2.3      | What you should expect from RCM?                                                       | 16        |
| 2.4      | Who should do RCM?                                                                     | 18        |
| <b>3</b> | <b>Basic Steps of Applying Reliability Centered Maintenance</b>                        | <b>23</b> |
| 3.1      | The seven steps in RCM process                                                         | 23        |
| 3.2      | Preparation of planning and forming a team for the analysis<br>(Step A-1)              | 24        |
| 3.3      | Selection of equipment for analysis (Step A-2)                                         | 25        |
| <b>4</b> | <b>Gathering and Breakdown of the Basic Information</b>                                | <b>31</b> |
| 4.1      | Identification of functions, performance standards and<br>operating context (Step B-3) | 31        |
| 4.2      | Identification of functional failures (Step B-4)                                       | 34        |
| 4.3      | Identification and evaluation of the effects of failure<br>(Step B-5)                  | 35        |
| 4.4      | Identification of the causes of failure (failure modes)<br>(Step B-6)                  | 36        |
| 4.5      | The six failure patterns                                                               | 37        |
| <b>5</b> | <b>Selecting Maintenance Tasks</b>                                                     | <b>41</b> |
| 5.1      | Implementing the results of analysis (Step C-7)                                        | 41        |
| 5.2      | Technical feasibility                                                                  | 43        |
| 5.3      | Age of assets, deterioration and age related failures                                  | 44        |
| 5.4      | Failures that are age related                                                          | 45        |
| 5.5      | Failures that are not age related                                                      | 45        |
| <b>6</b> | <b>Default Tasks</b>                                                                   | <b>47</b> |
| 6.1      | Default actions (Step C-7-B)                                                           | 47        |
| 6.2      | Fault finding task intervals                                                           | 48        |
| 6.3      | Technical feasibility                                                                  | 49        |
| 6.4      | Re-design (Step C-7-B-2)                                                               | 49        |
| 6.5      | Run-to-failure (RTF) (Step C-7-B-3)                                                    | 52        |

|           |                                                                                                               |            |
|-----------|---------------------------------------------------------------------------------------------------------------|------------|
| <b>7</b>  | <b>Sustainment of the RCM Program</b>                                                                         | <b>55</b>  |
| 7.1       | Introduction                                                                                                  | 55         |
| 7.2       | Sustaining the analysis                                                                                       | 56         |
| 7.3       | Handling day-to day emergent issues                                                                           | 56         |
| 7.4       | Sources of emergent issues                                                                                    | 57         |
| 7.5       | Age exploration tasks                                                                                         | 57         |
| 7.6       | Hardware changes                                                                                              | 57         |
| 7.7       | Trend analysis                                                                                                | 57         |
| 7.8       | Top degrader analysis                                                                                         | 57         |
| 7.9       | PM requirement documents review                                                                               | 58         |
| 7.10      | Task packaging review                                                                                         | 58         |
| 7.11      | Results of sustaining efforts                                                                                 | 58         |
| <b>8</b>  | <b>Predictive Maintenance</b>                                                                                 | <b>59</b>  |
| 8.1       | Introduction                                                                                                  | 59         |
| 8.2       | Benefits of predictive maintenance                                                                            | 59         |
| 8.3       | Types of predictive maintenance techniques                                                                    | 60         |
| <b>9</b>  | <b>Preventative Maintenance</b>                                                                               | <b>75</b>  |
| 9.1       | Definition of preventive maintenance                                                                          | 75         |
| 9.2       | Preventative maintenance task groups                                                                          | 75         |
| 9.3       | Development of PM program                                                                                     | 76         |
| 9.4       | Reasons for PM program                                                                                        | 77         |
| 9.5       | Risk involved in a PM program                                                                                 | 77         |
| 9.6       | Planning and scheduling in PM                                                                                 | 77         |
| 9.7       | PM implementation                                                                                             | 79         |
| 9.8       | The success of a PM programme                                                                                 | 82         |
| 9.9       | Software overview for PM program                                                                              | 83         |
| <b>10</b> | <b>Failure Modes and Effects Analysis(FMEA) &amp; Failure Modes, Effects and Criticality Analysis (FMECA)</b> | <b>85</b>  |
| 10.1      | Failure modes and effects analysis                                                                            | 85         |
| 10.2      | Types of FMEA                                                                                                 | 86         |
| 10.3      | Concept FMEA                                                                                                  | 87         |
| 10.4      | Design FMEA                                                                                                   | 87         |
| 10.5      | Process FMEA                                                                                                  | 88         |
| 10.6      | Approaches of FMEA analysis                                                                                   | 88         |
| 10.7      | The FMEA Process                                                                                              | 90         |
| 10.8      | Defining FMEA Terms                                                                                           | 90         |
| 10.9      | Failure modes, effects and criticality analysis (FMECA)                                                       | 94         |
| 10.10     | The FMECA process                                                                                             | 94         |
| 10.11     | Criticality analysis                                                                                          | 95         |
| <b>11</b> | <b>RCM Decision Process</b>                                                                                   | <b>105</b> |
