

Table of Contents

1	Introduction to Pipe Stress Analysis	1
1.1	Need for stress analysis in piping systems	1
1.2	Consequences of overstressing in piping systems	2
1.3	Fundamental physical parameters used in stress analysis	3
1.4	Physical quantities and units used in pipe stress analysis	6
1.5	Tensile testing and stress-strain curves	12
1.6	Thermal effects and flexibility of piping systems	15
1.7	Summary	17
2	Piping Materials	19
2.1	Introduction	19
2.2	Material properties	20
2.3	Material classification system and specifications	24
2.4	Piping specifications	29
2.5	Material selection	31
2.6	Quality control, testing and material certification	32
2.7	Summary	32
3	Codes Governing Piping Design and Pipe Stress Analysis	33
3.1	Philosophy, objectives and intent of piping codes	33
3.2	Role and scope of piping codes	34
3.3	Information available from piping codes	35
3.4	ASME B31.3 Process Piping	36
3.5	ASME B31.4 Pipeline Transportation Systems for Liquid Hydrocarbons and Other Liquids	37
3.6	ASME B31.8 Gas Transmission and Distribution Piping Systems	38
3.7	Other ASME B31 Codes	39
3.8	AS 4041 – 2006: Pressure piping	39
3.9	Codes governing long distance pipelines	41
3.10	Summary	42
4	Principal Stresses and Failure Theories	45
4.1	Longitudinal, Circumferential and Radial stresses in pipe walls	45
4.2	Principal axes and Principal stresses	48
4.3	Failure theories	49
4.4	Maximum Principal stress failure theory	49
4.5	Maximum Shear stress failure theory	49
4.6	Shear strain energy theory	50
4.7	Maximum strain energy theory	51
4.8	Summary	51

5	Design Conditions and Allowable Stresses	53
5.1	Design pressure and design temperature	53
5.2	Basis for code allowable stresses	54
5.3	Allowable stress data	56
5.4	Primary and secondary stresses	57
5.5	Summary	60
6	Design of Pipe Wall Thickness for Internal Pressure	63
6.1	Wall thickness design equations	63
6.2	Maximum allowable working pressure	67
6.3	Pressure-temperature class ratings for flanges	69
6.4	Determination of pressure class ratings for flanges	69
6.5	Summary	71
7	Loads on Piping Systems and Code Criteria for Design	73
7.1	Primary and secondary loads	73
7.2	Self-limiting and non self-limiting characteristics of loads	74
7.3	Sustained and Occasional loads	74
7.4	Static and dynamic loads	74
7.5	Load cases used in stress analysis calculations	75
7.6	Bending stresses in pipes	75
7.7	Total longitudinal stress in pipes	76
7.8	Torsional stress in pipes	78
7.9	Code criteria for design	78
7.10	Summary	80
8	Thermal Stresses in Piping Systems	81
8.1	Stresses due to thermal expansion and contraction	81
8.2	Thermal expansion and contraction of materials	82
8.3	Thermal fatigue and cyclic stress reduction factor	84
8.4	Design criteria for expansion stress	85
8.5	Code allowable stress range for thermal expansion	86
8.6	Flexibility and stress intensification factors (SIF)	86
8.7	Calculation of expansion stress range	88
8.8	Summary of code requirements for safe design of piping systems	91
8.9	Summary	91
9	Pipe Stress Analysis Software—Introduction to CAESAR II	93
9.1	Introduction to pipe stress analysis software	93
9.2	Overview of CAESAR II stress analysis software	94
9.3	Piping input spreadsheet and creation of the stress model	95
9.4	Static analysis	97
9.5	Dynamic analysis	98
9.6	Building the load cases and running the analysis	99
9.7	Output and Results	100
9.8	Summary	103
10	CAESAR II Practical Exercises	105

Appendix A: Exercises	109
Appendix B: Answers to Exercises	115
Appendix C: Practical Problems	117
Appendix D: Answers to Practical Problems	119
Appendix E: Pipe Data and Fitting Dimensions	125
Appendix F: Pipe Data and Fitting Dimensions – USCS Units	141
Appendix G: Solutions to Sample Exercises – USCS Units	153
Appendix H: Supplement to Chapter 10 – Metric Units	169
