

Contents

1	Introduction	1
1.1	Basic requirements of communications	1
1.2	Communication topologies	2
1.3	Communication techniques	5
1.4	Media access control methods	6
1.5	The OSI model	10
1.6	Communication protocols	12
1.7	Distributed Network Protocol 3.0 (DNP3)	12
1.8	IEC60870-5-101	28
1.9	IEC60870-5-103	32
1.10	UCA 2.0 (an overview)	35
1.11	Standardization	35
1.12	IEC 61850 standard	36
1.13	Communication needs in power systems	36
1.14	Standard development within IEC TC57	37
1.15	Basic features and specification of SA systems	38
1.16	Introducing IEC61850	40
2	Substation Automation Functions	43
2.1	Introduction	43
2.2	The remote terminal unit	43
2.3	Programmable logic controllers	44
2.4	Protection relays	45
2.5	The intelligent electronic device (IED)	45
3	Power System Automation Architectures	49
3.1	Introduction	49
3.2	Types of power system automation architectures	56
3.3	Architecture of HV substation automated systems	61
3.4	Automation of MV substations	65
3.5	High voltage bay control unit	69
3.6	Current and future trends in substation automation	71
4	Basic IEC61850 Substation Architecture	73
4.1	IEC61850 Architecture	73
5	Communications Basics	79
5.1	The origins of Ethernet	79
5.2	Physical layer implementations	80
5.3	Half-duplex Ethernet design rules	84
5.4	Achieving higher speed	85
5.5	100Base-T	85
5.6	Fast Ethernet design consideration	88

5.7	Gigabit Ethernet	89
5.8	Gigabit Ethernet design considerations	93
5.9	Ethernet media access control (CDMA/CD)	94
5.10	Full-duplex Ethernet	95
5.11	Deterministic Ethernet	96
5.12	Performance criteria	96
5.13	Virtual LAN (VLAN)	97
5.14	Switch rings and redundancy	102
5.15	Redundancy protocols	105
5.16	Port-based authentication (IEEE802.1X)	107
6	TCP/IP and Related Concepts	109
6.1	TCP/IP	109
6.2	IPv4	113
6.3	IPv6/IPng	119
6.4	Multi Protocol Label Switching (MPLS)	127
6.5	Wide Area Networks	130
6.6	Digital transmission hierarchies	131
6.7	WAN protocol overview	133
7	IEC Data Modelling Approach	139
7.1	Data Modelling	139
8	IEC 61850 Data Modelling & Communication Models	155
8.1	Common Data Class (CDC)	155
8.2	Communication model in 61850	161
9	Time Sync, Configuration Language and Tools	169
9.1	Time sync in substation automation	169
9.2	Substation configuration language (SCL)	170
9.3	Software tools	180
10	Conformance Testing	181
10.1	Conformance testing	181
11	Migration and Implementation Issues	185
11.1	Migration	185
11.2	Benefits of IEC61850	188
11.3	Implementation issues	189
11.4	Basic strategies	189
11.5	Constraints	190
11.6	Competence management	190
11.7	Electrical protection	190
11.8	Suppliers	191
11.9	Power system automation and the internet	191
11.10	Summary	192

12	Review of Power System Automation Products and Recent Developments	193
12.1	Introduction	193
12.2	GE	193
12.3	ABB	197
12.4	SEL	200
12.5	Siemens	206
12.6	ALSTOM	210
12.7	Recent developments	214
Appendix A – Practical Exercises		225
Appendix B – Further Readings		255
