# Practical Fundamentals of Heating, Ventilation & Air-conditioning (HVAC) for Engineers & Technicians

---

## Contents

<b>1</b>	<b>Introduction to HVAC</b>	<b>1</b>
	1.1 General	1
	1.2 Principles of thermodynamics	1
	1.3 Temperature and its measurement	5
	1.4 Pressure and temperature relationship	6
	1.5 Laws of thermodynamics	6
	1.6 Fundamentals of heat transfer	7
	1.7 Fundamentals of fluid flow	9
<b>2</b>	<b>Psychrometry</b>	<b>15</b>
	2.1 Introduction to psychrometry	15
	2.2 The properties of air	15
	2.3 Understanding the psychrometric charts	25
	2.4 Psychrometric processes	32
	2.5 Air conditioning systems-Summer and winter	43
<b>3</b>	<b>Requirements of Comfort air conditioning</b>	<b>53</b>
	3.1 General	53
	3.2 Air purification methods	56
	3.3 Thermodynamics of the human body	57
	3.4 Role of clothing	58
	3.5 Comfort and comfort chart	60
	3.6 Design considerations	64
	3.7 Requirements of temperature and humidity-high heat load industries	64
	3.8 Recommended inside design conditions	65
	3.9 Outside summer design conditions for some foreign cities	66
	3.10 Types of Ventilation Systems	68
	3.11 Effect of vertical temperature gradient & corrective measures	73
	3.12 Factors considered in air distribution systems indoor	75
	3.13 Indoor Air Quality	77
	3.14 Design of ventilation systems	85

*Technology Training that Works*

<b>4</b>	<b>Heating &amp; Cooling Load Calculation Procedure</b>	<b>101</b>
	4.1 General	101
	4.2 Definitions	102
	4.3 Design considerations	102
	4.4 Internal Sensible and Latent Heat Load components	103
	4.5 Comfort air conditioning	104
	4.6 Heat gain classification	105
	4.7 Miscellaneous heat sources	114
	4.8 Fresh air load	115
	4.9 Design of air-conditioning system	116
	4.10 By-pass factor (bf) consideration	121
<b>5</b>	<b>HVAC Systems</b>	<b>125</b>
	5.1 Heating systems	125
	5.2 Warm air heating systems	126
	5.3 Sizing heating systems	131
	5.4 Hot water heating system	131
	5.5 Steam heating systems	134
	5.6 Electric heating systems	135
	5.7 District heating system	135
	5.8 Warm air curtains	136
	5.9 Air-conditioning systems: General	137
	5.10 Heat pumps	158
	5.11 Air handling units	162
	5.12 Functional variations in the design	166
	5.13 Fan coil unit	181
	5.14 Capacity calculation of an air handling unit	183
<b>6</b>	<b>Variable air volume (VAV) systems</b>	<b>187</b>
	6.1 General	187
	6.2 System concept	187
	6.3 Different VAV systems	189
<b>7</b>	<b>Duct design, air flow and its distribution</b>	<b>195</b>
	7.1 Air flow and pressure losses	195
	7.2 Dynamic losses in ducts	199
	7.3 Duct design	202
	7.4 Duct arrangement systems	204
	7.5 Air distribution system inside space	207
	7.6 Ventilation systems	210
	7.7 Effect of vertical temperature gradient and corrective measures	212

*Technology Training that Works*

<b>8</b>	<b>Insulation of Air-conditioning systems</b>	<b>217</b>
	8.1 Introduction	217
	8.2 Desired properties of an ideal insulating material	217
	8.3 Factors affecting thermal conductivity	218
	8.4 Types of insulation materials	219
	8.5 Heat transfer through insulation	222
	8.6 Economical thickness of insulation	223
	8.7 Insulated systems	224
	8.8 Importance of relative humidity for the selection of insulation	227
<b>9</b>	<b>Air-conditioning equipment</b>	<b>229</b>
	9.1 Air filters	229
	9.2 Humidifiers	238
	9.3 Dehumidifiers	243
	9.4 Fans and blowers	248
	9.5 Grills and registers	254
<b>10</b>	<b>Refrigeration</b>	<b>257</b>
	10.1 General	257
	10.2 Methods of refrigeration	257
	10.3 Air refrigeration system	263
	10.4 Vapor compression refrigeration system	265
	10.5 Absorption refrigeration system	266
	10.6 Refrigerants	271
	10.7 Refrigerant nomenclature	276
	10.8 Important refrigerants	276
	10.9 Refrigeration equipment	279
<b>11</b>	<b>Controls and Instrumentation</b>	<b>299</b>
	11.1 Objectives	299
	11.2 Introduction	299
	11.3 Definitions	300
	11.4 Elements of control	304
	11.5 Types of control system	312
	11.6 Methods of control	315
	11.7 Selection of a control system	320
	11.8 Typical control systems	321
	11.9 Control specifications	325
	11.10 Conclusion	327

*Technology Training that Works*

<b>12</b>	<b>Installation, Commissioning, Operation, Testing &amp; Maintenance</b>	<b>329</b>
	12.1 Objectives	329
	12.2 Installation	329
	12.3 Charging the refrigeration unit	330
	12.4 Adding oil to the compressor	335
	12.5 Commissioning	336
	12.6 Other service operations	341
	12.7 Operational activities	343
	12.8 Do's and don'ts	345
	12.9 Maintenance	346
	12.10 Economics	352
<b>13</b>	<b>Fault finding and troubleshooting</b>	<b>355</b>
	13.1 Objectives	355
	13.2 Introduction	355
	13.3 Faults	355
	13.4 Troubleshooting	357
<b>14</b>	<b>Green House effect and future refrigerants</b>	<b>367</b>
	14.1 Objectives	367
	14.2 General	367
	14.3 The greenhouse effect	368
	14.4 History of CFCs	371
	14.5 Ozone depletion by CFCs and the greenhouse effect	372
	14.6 Global warming potential (GWP) and Ozone depleting potential(ODP)	373
	14.7 Montreal protocol (1987)	374
	14.8 Kyoto protocol	375
	14.9 Future refrigerants to replace CFCs	376
	<b>Appendices</b>	<b>381</b>
	Appendix A: Psychrometry	381
	Appendix B: Properties of refrigerants	395
	Appendix C: Conversions and tables	403
	Appendix D: Psychrometric charts plotting	419
	Appendix E: Testing, Adjusting and Balancing in HVAC systems	425
	Appendix F: Practical Exercises	443
	Appendix G: Practical Exercises - Answers	459
