

Technology Training that Works

Practical Electrical Wiring Standards – AS 3000:2007

Contents

1	Introduction to AS/NZS 3000:2007	1
1.1	Objectives of the course	1
1.2	Need for rules and regulations	2
1.3	Background and evolution of AS/NZS 3000	4
1.4	Objectives of AS/NZS 3000	5
1.5	Scope of AS/NZS 3000 Wiring Rules	6
1.6	General exceptions and exclusions	7
1.7	Other related regulations and standards	7
1.8	Arrangement of AS/NZS 3000	9
1.9	Summary	11
2	Electrical Distribution Systems	13
2.1	Evolution of electrical distribution systems	13
2.2	AC systems and DC systems	15
2.3	Poly-phase AC circuits	17
2.4	Vectorial Representations	18
2.5	Advantages of three phase systems	20
2.6	AC system connections	23
2.7	HV and LV distribution systems	24
2.8	Importance of earthing	25
2.9	Importance of testing and verification	27
2.10	Distribution systems in special locations	28
2.11	Summary	29
3	Design of Electrical Equipment and Safety	31
3.1	Objectives of safe design	31
3.2	Preventing electric shocks	32
3.3	Importance of insulation in electrical safety	33
3.4	Importance of enclosures in ensuring safety	35
3.5	Prevention of adverse thermal effects	40
3.6	Isolation arrangements	45
3.7	Earthing and interlocks	45

Technology Training that Works

3.8	Equipment selection	46
3.9	Role of codes and standards in installation safety	47
3.10	Summary	47
4	Earthing of Electrical Systems	49
4.1	Unearthed and earthed systems	49
4.2	Supply system (source) earthing or Functional earthing	53
4.3	Protective earthing	55
4.4	Prevention of shock hazards	55
4.5	Protective earth conductors	63
4.6	Earthing practices in low voltage consumer installations	63
4.7	Earth fault loop impedance	68
4.8	Sensing of earth faults	70
4.9	Summary	71
5	Section 1 – Scope, Application and Fundamental Principles	73
5.1	Scope and application areas	73
5.2	Definitions	74
5.3	Protection for safety	79
5.4	Design of an electrical installation	82
5.5	Selection of electrical equipment	82
5.6	Installation of electrical equipment	83
5.7	Verification and testing	84
5.8	Compliance requirements	84
5.9	Summary	85
6	Section 2 – General Arrangement, Control and Protection	87
6.1	Selection of switchgear and controlgear	87
6.2	Arrangement of electrical circuits and equipments	88
6.3	Electrical equipment control requirements	90
6.4	Isolation	90
6.5	Main isolation switches	92
6.6	Other main switches	93
6.7	Emergency switching	93
6.8	Switches for maintenance	94
6.9	Functional (control) switching	94
6.10	Fault protection and protective devices	95
6.11	Discrimination and coordination of protective devices	103
6.12	Simplified protective device selection	105
6.13	Residual current devices for protection	107
6.14	Automatic disconnection time	109
6.15	Protection against voltage effects	110
6.16	Switchboards	111
6.17	Summary	115

Technology Training that Works

7	Section 3 – Selection and Installation of Wiring Systems	117
7.1	Types of wiring systems	117
7.2	Selection criteria	119
7.3	External influences	119
7.4	Sizing of conductors	121
7.5	Installation requirements of wiring systems	125
7.6	Enclosure of cables	129
7.7	Cables installed in conduits	129
7.8	Underground wiring systems	130
7.9	Aerial wiring systems	133
7.10	Cables supported by a catenary	136
7.11	Earth sheath return systems	136
7.12	Summary	137
8	Section 4 – Selection and Installation of Appliances and Accessories	139
8.1	Selection and installation criteria	139
8.2	Protection against thermal effects	140
8.3	Connection of electrical equipment	141
8.4	Socket-outlets	142
8.5	Lighting equipment and accessories	143
8.6	Cooking appliances and heating systems	145
8.7	Electricity converters	146
8.8	Motors	147
8.9	Transformers	149
8.10	Capacitors	150
8.11	Summary	115
9	Section 5 – Earthing Arrangements and Earthing Conductors	153
9.1	Requirements of earthing system	153
9.2	Multiple Earthed Neutral system	154
9.3	Selection of earthing conductor	156
9.4	Earthing connections	159
9.5	Equipment earthing	161
9.6	Earthing arrangements	161
9.7	Equipotential bonding	163
9.8	Earth fault loop impedance	164
9.9	Earthing requirements for other systems	168
9.10	Summary	168

Technology Training that Works

10	Section 6 – Damp Situations	169
10.1	Basic requirements	169
10.2	Locations of baths, showers or fixed water containers	170
10.3	Swimming pools, paddling pools and spa pools/tubs	177
10.4	Fountains and water features	181
10.5	Locations containing sauna heaters	183
10.6	Refrigeration rooms	185
10.7	Sanitization and general hosing down areas	185
10.8	Summary	186
11	Section 7 – Special Electrical Installations	187
11.1	Applicable areas	187
11.2	Safety services	188
11.3	Electricity Generation Systems	191
11.4	Electrical Separation	194
11.5	Extra-low voltage electrical installations	197
11.6	High voltage electrical installations	199
11.7	Hazardous areas	200
11.8	Other specific installations	201
11.9	Summary	202
12	Section 8 – Verification	205
12.1	Basic objectives and requirements	205
12.2	Safety precautions and testing devices	206
12.3	Visual Inspection	207
12.4	Mandatory tests	209
12.5	Summary	215
	Appendix 1 Determination of Maximum Demand for Electrical Installations	217
	Appendix 2 Wiring Systems Classification	225
	Appendix 3 IEC Classification of Supply Systems based on Earthing Practices	229
	Appendix 4 Earthing Regulations and Practices from Other National Codes	237
	Appendix 5 Electric Shock Survival	245
	Appendix 6 Exercises	247

Technology Training that Works

Appendix 7 Answers to Exercises	265
Appendix 8 Road Lighting Power Distribution	281
Appendix 9 Circuit Design for Low Voltage Installations	289
