# Practical Boiler Control and Instrumentation for Engineers and Technicians

---

## Contents

<b>1</b>	<b>Introduction to Boiler Controls</b>	<b>1</b>
1.1	Objectives of boiler controls	1
1.2	Boiler processes	3
1.3	Process dynamics in boilers	6
1.4	Overview of boiler types	7
1.5	Hazards of boiler operations	13
1.6	Boiler control functions	16
1.7	Safety control functions	20
1.8	Practical Exercise No. 1	20
1.9	Summary	20
<b>2</b>	<b>Process Controls and Instrumentation</b>	<b>21</b>
2.1	Overview of sensors, controllers and actuators	22
2.2	Sensor types	24
2.3	Final control elements or actuators	27
2.4	Control system equipment	28
2.5	Risk reduction by safety instrumented systems	30
2.6	Introduction to process control	43
2.7	Summary	54
<b>3</b>	<b>Feedwater and Drum Level Control</b>	<b>57</b>
3.1	Steam and water processes in the boiler	57
3.2	Feedwater systems overview	60
3.3	Feedwater control strategies	62
3.4	Drum level measurement systems	65
3.5	Safety systems for drum level	71
3.6	Measurement of steam flow protection	73
3.7	Water quality: management and control	75
3.8	Summary	77
3.9	Practical Exercises	77
<b>4</b>	<b>Furnace and Air Draft Controls</b>	<b>79</b>
4.1	Furnace draft processes	79
4.2	Balanced draft boilers	81
4.3	Draft losses (pressure drops) in the gas path	82
4.4	Measurement of furnace draft	83
4.5	Draft control schemes	85
4.6	ID Control Overrides	89
4.7	Implosion Protection	90
4.8	Conclusions on draft pressure control	92

*Technology Training that Works*

<b>5</b>	<b>Combustion Control Systems</b>	<b>93</b>
5.1	Introduction	93
5.2	Combustion Processes	95
5.3	Fuel/Air control systems	100
5.4	Control Strategies	102
5.5	Metering systems - characteristics	106
5.6	Series metering combustion controls	107
5.7	Fuel and Air Characterisation	110
5.8	Combustion air and trimming controls	112
5.9	Optimisation of the boiler fuel efficiency	114
5.10	Flue gas analyser equipment	117
5.11	Flow measurements for combustion systems	119
5.12	Notes on controls for coal firing systems	120
5.13	Summary	122
<b>6</b>	<b>Burner Management Systems</b>	<b>125</b>
6.1	Functions of Burner Management Systems	125
6.2	Safety requirements for light up, flame safety and shut down	126
6.3	Master fuel tripping logic	132
6.4	Engineering standards for furnace safety and BMS	133
6.5	BMS controller equipment and its relationship to boiler safety trips	134
6.6	Ignition systems	137
6.7	Flame detectors and monitoring	138
6.8	Summary	142
<b>7</b>	<b>Steam Pressure and Load Control</b>	<b>143</b>
7.1	Steam pressure control	143
7.2	Pressure control and load management in multiple boiler installations	144
7.3	Pressure control with turbine generator units	146
7.4	Summary	149
<b>8</b>	<b>Steam Temperature Controls</b>	<b>151</b>
8.1	Superheater designs	151
8.2	Temperature control by design	152
8.3	Waterside temperature control	154
8.4	Fireside control of system superheating	158
8.5	Controls for the Integrated Boiler Turbine Unit	158
	<b>Appendix A – Instrument and control symbols for Boiler Controls</b>	<b>161</b>
	<b>Appendix B – Glossary of terms and abbreviations</b>	<b>167</b>
	<b>Appendix C - Practical Exercises</b>	<b>179</b>
	<b>Appendix D – Answers to Practical Exercises</b>	<b>201</b>
	<b>Appendix E – Notes on analysers for boiler control and monitoring</b>	<b>233</b>
