

Technology Training that Works

Standby Power and Energy Efficiency

Contents

1	Main Forms of Energy	1
1.1	Energy forms	1
1.2	Energy conversion	2
1.3	Energy converted to electricity for direct use	3
1.4	Use of fuels for motive powers	4
1.5	The global energy concerns	5
2	Electrical Energy Usage	9
2.1	Sectors using electricity	9
2.2	Uses of electricity	10
2.3	Better efficiencies in electricity usage	19
3	Critical Power Needs and Solutions	21
3.1	Problems arising from power failure	21
3.2	Tolerance for interruptions and voltage/frequency excursions	22
3.3	Classifications of alternate power supply systems	23
3.4	Reliability assessment	27
3.5	Needs of equipment	27
4	Overview of Critical Power Supply Equipment	29
4.1	Critical power supply	29
4.2	Rotary power supply systems	30
4.3	Battery backed static UPS	33
4.4	Fuel cells	33
4.5	Diesel power	37
4.6	Cost of outages	40
4.7	Power system reliability	40
5	Diesel Generating Set – Part 1: Engines	43
5.1	Basic engine processes	43
5.2	Speed classifications	52
5.3	Service classifications	54
5.4	Basic engine design and classification	56
5.5	Ambient conditions	58
5.6	ISO Standards	58
5.7	Performance and efficiency enhancements	60
5.8	Fuel combustion methods	61

Technology Training that Works

6	Diesel Generating Set – Part 2: Generators	65
6.1	Principles of operation	65
6.2	Generator components	69
6.3	AC generator types	71
6.4	Generator construction	72
6.5	Insulation	78
6.6	LV and MV generators	79
6.7	Typical circuitry	79
6.8	Load types and generator sizing	80
6.9	Generator earthing	80
6.10	Faults and protection	81
6.11	Performance evaluation and testing	86
6.12	Summary	86
7	Static UPS Basics	89
7.1	General configuration	89
7.2	Types of static UPS systems	91
7.3	UPS metering, indications, alarms and protection	95
7.4	Power quality and UPS	96
7.5	UPS applications to computer loads	97
7.6	UPS configurations in computer installations	99
7.7	Rating of UPS systems for computer equipment	100
7.8	Redundant UPS configuration	100
7.9	Grounding of UPS derived supplies	101
8	Basics of Batteries	107
8.1	The battery and its two basic types	107
8.2	Secondary cells – construction	108
8.3	Applications of secondary batteries	110
8.4	General features	111
8.5	Battery types and construction	113
8.6	Chemical reactions in batteries	113
8.7	Salient features of lead-acid batteries	115
8.8	Salient features of nickel-cadmium batteries	116
8.9	Main types of lead-acid batteries	116
8.10	Lead-acid battery – the manufacturing process	118
9	Charging and Discharging of Batteries	121
9.1	The need for charging	121
9.2	Types of charging	122
9.3	Completion of charging	128
9.4	Overcharging and undercharging	129
9.5	Discharging of batteries	130
9.6	Battery charging equipment	132
9.7	Nickel-cadmium batteries	133

Technology Training that Works

10	Selection and Sizing of Batteries	137
10.1	Applicable definitions	137
10.2	Battery selection – a basic approach	137
10.3	Application information	138
10.4	Sizing procedure	141
10.5	Calculating the number of cells	141
10.6	Duty cycle	144
10.7	Computing the battery capacity based on duty cycle	146
10.8	Alternative method of sizing	149
10.9	Correction factors	150
10.10	UPS battery sizing	152
11	Installation of Batteries	155
11.1	Requirements for safety during installation and operation	155
11.2	Receipt and checking of batteries and accessories	155
11.3	Storage prior to installation	156
11.4	Pre-installation planning	158
11.5	Installation of battery racks	158
11.6	Handling and pre-installation checks	159
11.7	Mounting of cells on racks	160
11.8	Installing flame arrestors and labels	160
11.9	Making electrical connections	161
11.10	Checking the integrity of electrical connections	162
11.11	Making external electrical connections	163
12	Fuel Cells	165
12.1	Fuel cell basics	165
12.2	Polymer exchange membrane fuel cell	166
12.3	Comparison of fuel cells with battery backed UPS systems	169
12.4	Comparison of fuel cells with engine-based power supplies	170
12.5	Fuel cell applications for critical power	171
12.6	Regenerative fuel cells	171
13	Energy Efficient Practices in Electricity Use	173
13.1	Implementing energy management in organizations	173
13.2	Energy sources and energy sinks	175
13.3	High efficiency motors	178
13.4	Replacement of motors	184
13.5	Variable speed drives	186
13.6	Lighting systems	187
13.7	Lighting efficiency improvements	188
13.8	Intelligent buildings	190

Technology Training that Works

14	Energy Efficiency in Climate Control (HVAC) Systems	193
14.1	HVAC system and components	193
14.2	Types of climate control	196
14.3	Heating systems	196
14.4	Typical heating systems	197
14.5	Cooling systems	197
14.6	Typical cooling systems	198
14.7	Control systems for HVAC	201
14.8	Efficiency in cooling and heating systems	202
14.9	Building design features to improve cooling	203
<hr/>		
15	Introduction to Energy Audits	207
15.1	Energy audits and principles	207
15.2	Basic financials	209
15.3	Energy use and cost indices	212
15.4	Tracking and controlling systems	213
15.5	Energy and cost saving opportunities	217
<hr/>		
	Appendix A	
	Energy Audit Report Example	219
