

Technology Training that Works Contents 1

Installation, Calibration and Maintenance of Electronic Instruments

Contents

Chapter 1— Maintenance	1
1.1 Corrective/preventative/predictive maintenance of instruments	1
1.2 Troubleshooting	2
<hr/>	
Chapter 2— Electrical measurements	7
2.1 Voltage/current and resistance measurement	7
2.2 Analog and digital meters	14
2.3 Oscilloscopes	24
2.4 Diodes and resistors	41
2.5 Soldering and component preparation	55
2.6 Testing of diodes/DIACS/TRIACS	66
<hr/>	
Chapter 3 — Instrument performance	71
3.1 Measurements	71
3.2 Important terms and specifications	83
3.3 Process dynamics	90
<hr/>	
Chapter 4— Calibration principles	95
4.1 Calibration	95
4.2 Process of calibration	97
4.3 Block diagrams	101
4.4 Classification of standards	102
4.5 Standards for calibration	103
4.6 Calibration of instruments	105
4.7 Documentation of calibration procedure	107

Technology Training that Works Contents 2

Chapter 5— Fundamentals of process measurement	111
5.1 Basic measurement concepts	111
5.2 Definition of terminology	115
5.3 Measuring instruments and control valves as part of the overall control system	118
5.4 Pressure, level, temperature and flow overview	118
5.5 Principles of temperature measurement	126
5.6 Thermocouples	126
5.7 Resistance temperature detectors (RTD's)	127
5.8 Thermistors	128
5.9 Non contact pyrometers	130
5.10 Principles of flow measurement	132
5.11 Overview of control valves	137
Chapter 6— Calibration of transmitters	139
6.1 Electro pneumatic calibrators	139
6.2 Temperature	148
Chapter 7— PID Controllers	157
7.1 Reverse or direct acting controllers	157
7.2 P, I and D control	158
7.3 Spanning and range	163
7.4 Instrument / controller and process gains	164
Chapter 8— Smart and Fieldbus transmitters	167
8.1 The new smart instrument and FieldBus	167
8.2 Noise and earthing considerations	173
8.3 Materials of construction	183
8.4 Linearisation	184
Chapter 9— Documentation	187
9.1 Introduction	187
9.2 Wiring diagrams	190
9.3 Drawings, data sheets and tables	190
9.4 Loop diagrams	191
9.5 Standards & Symbols	196
9.6 Electrical drawings and diagrams	211

Technology Training that Works Contents 3

Chapter 10— Hazardous Areas	213
10.1 Introduction	213
10.2 Definition of hazardous area	214
10.3 Classification of apparatus	215
10.4 Apparatus grouping and temperature	217
10.5 Principles of ex protection	223
10.6 Requirements for IS systems	225
10.7 Earthing requirements	225
10.8 Static protection	226
10.9 Lightning protection	227

Chapter 11— Planned maintenance	231
11.1 Inspection and maintenance	231
11.2 Procedures	234
11.3 Safe methods	236
11.4 Test equipment suitability	250

Chapter 12— Standards, certification, marking and approval	259
12.1 Authorities	259
12.2 Marking and identification	272
12.3 Apparatus certification	276

Chapter 13— Integration of the system	281
13.1 Calculation of individual instruments and total error for the system	281
13.2 Selection considerations	285
13.3 Testing and commissioning of the subsystems	287

Appendix A: Calibration Data Sheets	291
--	------------

Appendix B: Practical exercises	297
--	------------
