

Technology Training that Works

Practical Distributed Control Systems (DCS) for Engineers & Technicians

Contents

Chapter 1— Introduction to Computer Based Control Systems	1
1.1 Introduction to computer based measurement and control systems	1
1.2 Role of computers in measurement and (process) control	3
1.3 Basic components of computer based measurement and control systems	4
1.4 Architecture – computer based process control system	7
1.5 Human Machine Interface (HMI)	12
1.6 Hardware for computer based process control system	13
1.7 Interfacing computer system with process	19
1.8 Economics of computer based system for industrial application	24
<hr/>	
Chapter 2—Overview of Distributed Control Systems	25
2.1 Introduction	25
2.2 Basic concepts of Distributed Computing	26
2.3 Evolution of Distributed Computing System	27
2.4 Present market trends in DCS	31
2.5 Basic DCS specification	34
2.6 General description of a commercial DCS	34
2.7 Advantage of DCS systems	36
2.8 DCS selection criteria	37
2.9 DCS architecture	41
<hr/>	
Chapter 3—An overview of SCADA systems	63
3.1 Introduction	63
3.2 Basics of SCADA system	63
3.3 SCADA key features	65
3.4 Remote terminal units (RTUs)	67
3.5 Typical requirements for an RTU system	69
3.6 PLCs used as RTUs	70
3.7 Consideration and benefits of SCADA system	70
3.8 DCS versus SCADA terminology	71
3.9 SCADA software package	73

Technology Training that Works

Chapter 4— The basic controller	77
4.1 Introduction	77
4.2 Identification of the controller boards	77
4.3 Discrete and logic control	79
4.4 Sequential and batch control	80
Chapter 5— Basic DCS controller configuration	85
5.1 Historical	85
5.2 Control modes	85
5.3 Tracking and initialization in control slots used for cascade control	86
5.4 Control functions	89
5.5 Control algorithms	94
5.6 Sequential programs for batch processing	106
5.7 Defining equipment procedures	108
5.8 Phase logic programming	108
5.9 Phase logic interface	111
5.10 Logic block functions in advanced controller	114
5.11 DCS controller configuration	116
Chapter 6— Introduction to communications for DCS & SCADA systems	119
6.1 Purpose	119
6.2 Basic communications principles	119
6.3 Balanced and unbalanced transmission lines	123
6.4 EIA-232 interface standard (CCITT V.24 interface standard)	125
6.5 The EIA-485 interface standard	132
6.6 Open systems	136
6.7 Interoperability	140
6.8 ModBus protocol	140
6.9 HART protocol	145
6.10 The promise of FieldBus and DeviceNet	149
6.11 Benefits	149
Chapter 7— Programming of DCS systems	153
7.1 Development and growth of programmable controllers (PLC) - an introduction	154
7.2 Need for standardization in programming approach	155
7.3 Drawbacks in conventional programming methodology	156
7.4 Features of IEC-1131-3 language definition	161
7.5 Summary of IEC-1131-3	162
7.6 PLC software architecture - software quality attributes	162
7.7 IEC software architecture	163
7.8 Component parts of IEC software architecture	164
7.9 Functions and function blocks	165

Technology Training that Works

7.10	Local and global variables	166
7.11	Mapping software model to real life systems-Examples	168
7.12	Applications	169
7.13	Summary of PLC architecture	172
7.14	Common elements in IEC-1131-3	173
7.15	Elementary data types	174
7.16	Generic data type	177
7.17	Derived data types	178
7.18	Variables	180
7.19	Variable initialization	184
7.20	Functions	184
7.21	Programs	189
7.22	Resource	190
7.23	Tasks	190
7.24	Summary of common elements in IEC-1131-3	192
7.25	Structured text	193
7.26	Statements used for assignments	193
7.27	Expressions	194
7.28	Evaluating an expression	194
7.29	Statements	195
7.30	Conditional statements	196
7.31	Iteration statements	197
7.32	Implementation dependence	199
7.33	Summary of structured text	200
7.34	Function block diagram	200
7.35	Basics	200
7.36	Methodology	201
7.37	Signal flow	202
7.38	Feedback path	203
7.39	Network layout	204
7.40	Function execution control	204
7.41	Jumps and labels	205
7.42	Network evaluation rules	205
7.43	Summary of function block diagram	206
7.44	Ladder diagrams	206
7.45	Basic concept	206
7.46	Graphical symbols used in ladder diagram	207
7.47	Boolean expressions using ladder diagrams	209
7.48	Integrating functions & function blocks....	210
7.49	Feedback paths	210
7.50	Jumps and labels	212
7.51	Network evaluation rules	212
7.52	Portability	212
7.53	Summary of ladder diagrams	213
7.54	Instruction List	213
7.55	Structure of IL programming language	214
7.56	Calling functions and function blocks	218
7.57	Portability and other issues	220

Technology Training that Works

7.58	Summary of Instruction List	221
7.59	Sequential function chart (SFC)	221
7.60	Steps	226
7.61	Transitions	227
7.62	Actions	228
7.63	Action qualifiers	230
7.64	Action control function block	233
7.65	Execution rules	233
7.66	Design safety issues	234
7.67	Top down design	235
7.68	Summary of sequential function charts	236

Chapter 8— Alarm system management	237
---	------------

8.1	An alarm system	237
8.2	Functions of the plant or process operator	238
8.3	Functions of an alarm system	241
8.4	An effective alarm system	241
8.5	Design overview	243
8.6	Human and ergonomic factors	244
8.7	Structure of a good alarm system	247
8.8	Safety integrity level (SIL)	255
8.9	Definition of strategy	256
8.10	Strategy for alarm system design	256
8.11	Strategy for alarm system maintenance and management at the site/plant	257
8.12	Generation of minimum design documentation for each alarm	257
8.13	Measurement of the alarms	261
8.14	Field measurements for deriving alarms	261
8.15	Hardware for alarm processing	262
8.16	Alarm displays	262
8.17	Testing of alarms	264
8.18	Generation of various types of alarms	264
8.19	Selection of alarm settings	271
8.20	Setting alarm priority	273
8.21	Design of field sensors for generating alarms	279
8.22	Logical processing of alarms	284
8.23	Design of alarm list displays	289
8.24	Measurement of performance	293
8.25	Usefulness of alarms	296
8.26	Measurement of number of alarms and average rate of alarms	299
8.27	Measuring operator response	305
8.28	Management of improvement program	306
8.29	Alarm review	307
8.30	Elimination of spurious alarms	308
8.31	Intermittent and fleeting alarms	308
8.32	Processing alarms	309
8.33	Control of modifications	314

Technology Training that Works

8.34	Hazard and operability studies (HAZOP)	315
8.35	Hazard assessment	315
8.36	Hazard and operability studies (HAZOP)	318

Chapter 9—Distributed control system reporting	321
---	------------

9.1	Introduction	321
9.2	Operation of advanced DCS using multi-screen display cross screen invocation and linking	321 321
9.3	Alarm reporting, generation and acceptance	325
9.4	Alarm reporting	326
9.5	Generation of alarms	328
9.6	Different types of logs and reports configurable on a DCS	329

Chapter 10—Distributed control system (DCS) configuration	337
--	------------

10.1	Introduction	337
10.2	An engineering station	337
10.3	System/project tree structure	338
10.4	DCS system database	338
10.5	Configuration of control functions	339
10.6	Configuration of operator/monitoring functions	342
10.7	Configuration of system hardware structure	343
10.8	Configuration of system software	343
10.9	Documentation	344
10.10	Commissioning	345

Chapter 11—Maintenance consideration	347
---	------------

11.1	Introduction	347
11.2	Maintenance requirements of system and system elements	347
11.3	Requirements for in-built diagnostic and maintenance routines	353
11.4	Requirement for installation of UPS system	359
11.5	Recovery of a DCS following power outage	359

Chapter 12— Typical distributed control systems and SCADA systems	361
--	------------

12.1	Introduction	361
12.2	Honeywell PlantScape system	361
12.3	Foxboro I/A series distributed control systems	371
12.4	Delta V system	378
12.5	Citect	380
12.6	Wonderware	388

Technology Training that Works

Chapter 13—Distributed control system applications	395
13.1 Introduction	395
13.2 Use of DCS in pulp and paper environment	395
13.3 Use of DCS in petroleum-refining environment	412
13.4 Use of DCS in oil and gas processing environment	423
Chapter 14—Distributed control systems implementation	425
14.1 Introduction	425
14.2 System strategy	425
14.3 Automation plan	426
14.4 Project implementation	432
14.5 Installation and commissioning	435
14.6 Change management	438
Appendix A—Fundamentals of control systems	439
Appendix B—Integration of the complete FieldBus system	449
Appendix C—Adaptive and predictive control	461
Appendix D—Central site computer facilities	473
Appendix E—Fuzzy logic control	485
Appendix F—Stability and control modes of closed loops	489
Appendix G—DCS and process control exercises	501
Appendix H—Foundation Fieldbus	513
Appendix I – Local Area Network Systems	551
Appendix J – ProfiBus	583
Appendix K - Glossary	601
