

Technology Training that Works

Practical Energy Efficiency, Design, Engineering and Auditing

Contents

1	The Need for Energy Efficiency	1
1.1	Global Energy scenario	1
1.2	Climate change and environmental concerns	4
1.3	Global responses	6
1.4	Kyoto protocol	8
1.5	Can we make better use of energy?	12
1.6	How do we channel waste energy into useful output?	14
1.7	Australia and the energy scenario	15
1.8	Summary	21
2	The Basics of Energy	23
2.1	Energy forms and conversions	23
2.2	Basics of electricity	25
2.3	Basics of thermal energy	30
2.4	Energy sources and energy sinks	31
2.5	Direct energy conversion	34
2.6	Summary	34
3	Energy Management Systems	37
3.1	Introduction	38
3.2	Implementing energy management in organizations	38
3.3	Energy plan	45
3.4	Tracking and controlling systems	47
3.5	Energy audits and principles	52
3.6	Energy codes and standards	57
3.7	Energy accounting	61
3.8	Energy and electric rate structures	63
3.9	Energy metering systems	72
3.10	Basic financials	75
3.11	Summary	78
4	Fuels and Consumption	79
4.1	Introduction	79
4.2	Fuels	80
4.3	Liquid fuels	80
4.4	Solid fuels	81
4.5	Gaseous fuels	82

Technology Training that Works

4.6	Combustion	83
4.7	Combustion of gas	85
4.8	Fuel Switching	88
4.9	Summary	89
<hr/>		
5	Sources of Energy	91
<hr/>		
5.1	Introduction	91
5.2	Fossil fuels	92
5.3	Renewable energy	98
5.4	Solar energy	99
5.5	Wind power	107
5.6	Geothermal energy	111
5.7	Hydropower	115
5.8	Hydrogen and fuel cells	120
5.9	Nuclear power	125
5.10	Energy from biomass	129
5.11	Challenges of energy conversion	132
5.12	Renewable and non-renewable energy resources in Australia	133
5.13	Summary	137
<hr/>		
6	Energy Efficient Practices in Thermal Energy Utilities	139
<hr/>		
6.1	Introduction	140
6.2	Boiler systems	140
6.3	Boiler efficiency	145
6.4	Important boiler accessories	146
6.5	Boiler blowdown	147
6.6	Steam distribution system	149
6.7	Energy efficient practices for boilers and steam systems - combustion efficiency	151
6.8	Practical examples	155
6.9	Furnaces	157
6.10	DG sets	168
6.11	Heat recovery systems	168
6.12	Cogeneration for better efficiency	171
6.13	Summary	177
<hr/>		
7	Energy Efficient Practices in Electricity Use	179
<hr/>		
7.1	Overall electricity use	179
7.2	Transmission and distribution of electricity	183
7.3	Role of power factor	184
7.4	Electricity in metal smelting	185
7.5	Motor systems	185
7.6	Life cycle cost analysis	187
7.7	Energy efficient motors	188
7.8	Variable speed drives	193
7.9	Methods of speed control	194

Technology Training that Works

7.10	Efficient operation of fans/blowers	203
7.11	Efficient operations of pumps	206
7.12	Compressed air systems	211
7.13	Lighting systems	218
7.14	Summary	224
8	Energy Efficiency in Climate Control Applications	227
8.1	Introduction	227
8.2	Heating systems	228
8.3	Heat load calculation	229
8.4	Cooling systems	231
8.5	Ventilation systems	243
8.6	Building management systems	245
8.7	Evaluating efficiency using the Australian Building Greenhouse Rating scheme	252
8.8	Measures for improving building efficiency	252
8.9	Summary	253
9	Audit Areas and Essential Instruments/Software	255
9.1	Boilers	255
9.2	Furnaces	260
9.3	Motors	263
9.4	Fans and blowers	266
9.5	Pumps	268
9.6	Compressors	269
9.7	HVAC systems	273
9.8	Lighting systems	277
9.9	Instrumentation for energy audits	281
9.10	Software tools for energy audit	292
9.11	Summary	293
10	Financials and Costings	295
10.1	Introduction	295
10.2	Investment proposal	296
10.3	Methods for ranking investment proposals	297
10.4	Financing options and energy service companies	308
10.5	Summary	317
	Appendix A	319
	Appendix B	337
	Appendix C	353
	Appendix D	355
	Example of an Audit Report	371
