

Technology Training that Works

Practical Earthing, Bonding, Lightning & Surge Protection

Contents

Preface	i
1 Introduction and grounding basics	1
1.1 Introduction	1
1.2 Basics of grounding	2
1.3 Bonding	4
1.4 Lightning and its effect on electrical systems	4
1.5 Static charges and need for bonding	5
1.6 Ground electrodes and factors affecting their efficacy	7
1.7 Noise in signaling circuits and protective measures such as shielding	9
1.8 Surge Protection of electronic equipment	10
1.9 UPS systems and their role in Power quality improvement	12
1.10 Case studies	12
1.11 Importance of Local Codes	12
1.12 Summary	12
2 Grounding of power supply systems and neutrals	13
2.1 Introduction	13
2.2 Ungrounded systems	15
2.3 Solidly grounded systems	17
2.4 Impedance grounding using neutral reactor	18
2.5 Resonant grounding using neutral reactor	18
2.6 Impedance grounding through neutral resistance	20
2.7 Point of grounding	21
2.8 Other challenges	23
2.9 Summary	23
3 Equipment grounding	25
3.1 Introduction	25
3.2 Shock hazard	25

Technology Training that Works

3.3	Grounding of equipment	28
3.4	Operation of protective devices	29
3.5	Thermal capability	30
3.6	Touch Potential during ground faults	31
3.7	Induced voltage problem	32
3.8	Mitigation by multiple ground connection	32
3.9	Mitigation by reduction of conductor spacing	33
3.10	EMI suppression	33
3.11	Metal enclosures for grounding conductors	33
3.12	Grounding connections for surge protection equipment	35
3.13	Sensing of ground faults	35
3.14	Equipotential bonding	37
3.15	Summary	38
4	Effect of lightning on buildings and electrical systems and how to provide protection	39
4.1	Introduction	39
4.2	Incidence of lightning	43
4.3	Probability of lightning stroke	47
4.4	Method of lightning protection	48
4.5	Planning for lightning protection	51
4.6	Improvements to Lightning Protection	52
4.7	Factors governing the decision whether to protect	53
4.8	Effect of lightning strike on electrical lines	54
4.9	Summary	55
5	Static electricity and protection	57
5.1	Introduction	57
5.2	What is static electricity?	57
5.3	Generation of charge	58
5.4	Some common examples of static build up	58
5.5	Energy of spark and its ignition capability	60
5.6	Dangers of static electricity buildup	60
5.7	Control of static electricity	61
5.8	Assessment of static risks and planning prevention	64
5.9	Summary	64

Technology Training that Works

6	Ground electrode systems	65
6.1	Introduction	65
6.2	Grounding electrodes	65
6.3	Soil resistance	66
6.4	Measurement of soil resistivity	68
6.5	Resistance of a single rod electrode	70
6.6	Current carrying capacity of an electrode	72
6.7	Use of multiple ground rods in parallel	73
6.8	Measurement of ground resistance of an electrode	73
6.9	Concrete encased electrodes	75
6.10	Corrosion problems in electrical grounding systems	77
6.11	Maintenance of grounding system	78
6.12	Chemical Electrodes	78
6.13	Summary	80
7	Surge protection of electronic equipment	83
7.1	Introduction	83
7.2	What is a surge?	83
7.3	Bonding of different ground systems as a means of surge proofing	83
7.4	Surges and surge protection	86
7.5	Principle of surge protection	89
7.6	Surge protection of electronic equipment	89
7.7	Achieving graded surge protection	92
7.8	Positioning and Selection of lightning/surge arrestor	93
7.9	A practical view of surge protection for sensitive equipment	95
7.10	Summary	104
8	Electrical noise and mitigation	105
8.1	Introduction	105
8.2	Definition of electrical noise and measures for noise reduction	105
8.3	How are sensitive circuits affected by noise?	108
8.4	Frequency analysis of noise	109
8.5	Categories of noise	112
8.6	Disturbances from other equipment in the same distribution system	113
8.7	Earth Loop as a cause of noise	114
8.8	The ways in which noise can enter a signal cable and its control	115
8.9	Electrostatic or capacitive coupling	117
8.10	Shielded isolation transformer	123

Technology Training that Works

8.11	Avoidance of earth loop	125
8.12	Use of Insulated Ground (IG) receptacle	128
8.13	Zero signal reference grid and signal transport ground plane	129
8.14	Harmonics in electrical systems	131
8.15	Summary	134
9	UPS systems and their grounding practices	135
9.1	Introduction	135
9.2	Power quality issues	135
9.3	Definitions of abnormal voltage conditions	136
9.4	Susceptibility and measures to handle voltage abnormalities	140
9.5	Regulating transformer	140
9.6	Standby sources	142
9.7	Electro-mechanical UPS systems	145
9.8	Solid state UPS systems	147
9.9	Multiple units for redundancy	149
9.10	Considerations in selection of UPS systems for ADP facilities	150
9.11	Grounding issues in Static UPS configurations	151
9.12	UPS configurations and recommended grounding practices	158
9.13	Summary	155
10	Case studies	157
10.1	Introduction	157
10.2	Case study 1	157
10.3	Case study 2	159
10.4	Case study 3	161
10.5	Case study 4	162
10.6	Case study 5	164
10.7	Case study 6	164
10.8	Case study 7	166
10.9	Case study 8	167
Appendix A	Grounding regulations from various national codes	171
Appendix B	BS7671 system classification based on grounding practices	189
Appendix C	IEEE exposure classifications	197

Technology Training that Works

Appendix D	Glossary of terms	199
Appendix E	Grounding of electrical substations	209
Appendix F	Course exercises	229
Appendix G	Answer scheme	233
Appendix H	Group activities	245
Appendix I	Lightning protection of wind turbines	259
Appendix J	Grounding, Bonding & Lightning Protection of Marine Electrical Systems	
Case Study		289
