

Technology Training that Works

Practical Troubleshooting & Problem Solving of Ethernet Networks

Contents

1	Introduction to Ethernet	1
1.1	Introduction	1
1.2	Standards and standards institutions	3
1.3	Networking basics	4
1.4	Interoperability and internetworking	5
1.5	Network architecture and protocols	5
1.6	Layer design parameters	6
1.7	Entities, SAPs, IDUs/ SDUs	6
1.8	Connectionless and connection-oriented service	6
1.9	The Open Systems Interconnection (OSI) model	6
1.10	The TCP/IP reference model	10
1.11	OSI and IEEE sub-layers	11
1.12	Network topologies	12
1.13	Network communication	17
2	Data Communications and Networking	19
2.1	Introduction	19
2.2	Bits, bytes, character and codes	20
2.3	Communication principles	23
2.4	Transmission characteristics	26
2.5	Error correction	27
2.6	Encoding Methods	35
3	Basic Ethernet Operation	39
3.1	Introduction	39
3.2	IEEE standards and working groups	40
3.3	Ethernet frames	42
3.4	LLC frames and multiplexing	44
3.5	Media access control for half-duplex LANS (CSMA/CD)	46

Technology Training that Works

3.6	MAC (CSMA-CD) for gigabit half-duplex networks	49
3.7	Full-duplex	49
3.8	Auto-negotiation	51
3.9	Deterministic Ethernet	53
4	Ethernet Physical Layer implementations	55
4.1	Introduction	55
4.2	Components common to all media	55
4.3	10 Mbps media systems	58
4.4	100 Mbps media systems	64
4.5	Gigabit media systems	71
4.6	10 Gigabit Ethernet systems	75
5	Ethernet cabling and connectors	79
5.1	Cable types	79
5.2	Cable structure	79
5.3	Factors affecting cable performance	81
5.4	Selecting cables	83
5.5	AUI cable	84
5.6	Coaxial cable	84
5.7	Twisted pair cable	87
5.8	Fiber optic cable	92
5.9	The IBM cable system	99
5.10	Connectors	100
6	LAN system components	109
6.1	Introduction	109
6.2	Repeaters	110
6.3	Media converters	111
6.4	Bridges	112
6.5	Hubs	114
6.6	Switches	117
6.7	Routers	122
6.8	Gateways	123
6.9	Print servers	124
6.10	Terminal servers	124
6.11	Thin servers	125
6.12	Remote access servers	125
6.13	Network time servers	126

Technology Training that Works

7	Structured cabling	127
7.1	Introduction	127
7.2	TIA/EIA cabling standards	128
7.3	Components of structured cabling	128
7.4	Fiber-optics in structured cabling	132
8	Internet Protocol (IP)	137
8.1	Introduction	137
8.2	IPv4	141
8.3	IPv6	152
8.4	ARP and RARP	159
8.5	ICMP	162
8.6	Routing protocols	164
8.7	IGPs	167
8.8	EGPs	169
9	TCP, UDP, IPX/SPX and NetBIOS/NetBEUI	171
9.1	TCP	171
9.2	User Datagram Protocol (UDP)	178
9.3	IPX/SPX	180
9.4	NetBIOS and NetBEUI	182
10	Real Time Ethernet	185
10.1	What is 'Real Time'?	185
10.2	Ethernet in field buses	186
10.3	IEEE 1588	187
10.4	CIPSync	190
10.5	PROFInet	193
10.6	EtherCAT	195
10.7	Ethernet Powerlink	198
11	Industrial Ethernet	201
11.1	Introduction	201
11.2	Connectors and cabling	201
11.3	Packaging	203
11.4	Deterministic versus stochastic operation	204
11.5	Size and overhead of Ethernet frame	204
11.6	Noise and interference	205
11.7	Partitioning of the network	205

Technology Training that Works

11.8	Switching technology	205
11.9	Power over Ethernet (PoE)	206
11.10	Fast and Gigabit Ethernet	207
11.11	TCP/IP and industrial systems	207
11.12	Industrial Ethernet architectures for high availability	207
12	Troubleshooting	211
12.1	Introduction	211
12.2	Common problem and faults	211
12.3	Tools of the trade	212
12.4	Problems and solutions	213
12.5	Troubleshooting switched networks	223
12.6	Troubleshooting fasts Ethernet	223
12.7	Troubleshooting gigabit Ethernet	223
