Preface

i

1	Introduction	1
1.1	Introduction	1
1.2	Definitions	2
1.3	Investigation after accidents and disasters	4
1.4	History	5
1.5	Equipment certification	9
1.6	Conclusion	10
2	Flammability Characteristics, Ignition Sources and the Use of Electricity	11
2.1	Flammability	11
2.2	Flammability information (gasses and vapours)	16
2.3	Dusts	17
2.4	Theory into practice	20
2.5	General sources of ignition	20
2.6	Use of electricity and its sources of ignition	21
2.7	Electrical protection (as opposed to explosion protection)	24
2.8	Toxicity hazard	25
2.9	Conclusions	25
3	Area Classification	27
3.1	General	27
3.2	Overview of the principles of safety	28
3.3	Definitions	28
3.4	The process of assessment	29
3.5	Normal and abnormal operation	32
3.6	Classification into zones	33
3.7	Area classification process	35
3.8	Openings	39
3.9	Ventilation	41
3.10	HAC calculation	43
3.11	Area classification of dust hazards	50
3.12	Responsibility and personnel involved	51
3.13	Documentation	51
3.14	Policy and guidelines for implementation	53
3.15	General information	54
3.16	Area classification standards	55
3.17	HAC examples	56
3.18	Dusts	58
3.19	Classification in North America	59
3.20	Conclusions	60

4	Explosion Protection Philosophy and Equipment Classification Systems	63
4.1	General	63
4.2	Classification concepts	64
4.3	Introduction to equipment certification	64
4.4	Temperature classification	65
4.5	Equipment grouping	67
4.6	Types of explosion protection	72
4.7	Overview of explosion protection theory	74
4.8	Brief comparison of types of protection	75
4.9	Mixed techniques	81
4.10	Dust explosion protection methods	81
4.11	Selection of the type of explosion protection	82
4.12	Conclusion	83
5	Protection Concepts: Type of Protection; 'd'	85
5.1	Name	85
5.2	Standards	85
5.3	Definition	86
5.4	Principle of operation	86
5.5	Types of flamepath joint and uses	89
5.6	Explosion pressure	93
5.7	Certification	94
5.8	Cabling requirements for Ex d	95
5.9	Design and type-testing	101
5.10	Installation and conditions of use	102
5.11	Regional variations in Ex d implementation	104
5.12	Illustrations of mechanical construction	104
5.13	Summary	107
6	Protection Concept 'e'	109
6.1	Name	109
6.2	Standards	109
6.3	Definitions	110
6.4	Principles of design for increased safety	110
6.5	Component certification	112
6.6	Internal requirements of Ex e	113
6.7	Ex e enclosures	114
6.8	Rotating electrical machines	115
6.9	Cable and glanding requirements	117
6.10	Periodic inspection requirements	119
6.11	Marking	120
6.12	Applications	120
6.13	Summary	121
7	Protection Concept 'n'	123
7.1	Name	123
7.2	Standards	123
7.3	Definitions	125
7.4	Principles of design	126
7.5	Construction	127

7.6	Additional means of protection	128
7.7	Applications	133
7.8	Installation	133
7.9	Inspection	134
7.10	Live working	134
7.11	Conclusions	136
8	Protection Concept 'i' Principles	137
8.1	Name	137
8.2	Standards	137
8.3	Definition	137
8.4	Origins of intrinsic safety	138
8.5	Principles	138
8.6	Electrical theory	140
8.7	Implementation of IS	146
8.8	The shunt diode safety barrier	150
8.9	Associated apparatus	161
8.10	Electrical apparatus in the hazardous area	162
8.11	Enclosures	171
8.12	Temperature	171
8.13	The Ex i systems concept	172
8.14	An Ex i 'system'	172
8.15	Assessment of safety	172
8.16	Simple apparatus	174
8.17	Safety parameters	174
8.18	Temperature classification of systems	175
8.19	Systems concepts in other standards	175
8.20	Conclusion	175
9	Protection Concept Ex p	177
9.1	Name	177
9.2	Standards	177
9.3	Principle of operation	179
9.4	Purging	181
9.5	Pressurisation	183
9.6	Variations	183
9.7	Application notes	186
9.8	Certification and documentation	188
9.9	Pressure / Flow failure	188
9.10	Ex p protection type px, py and pz	190
9.11	Conclusion	192
10	Other types of Ex Protection and their use in Combination	195
10.1	General	195
10.2	Ex o	195
10.3	Ex q	197
10.4	Ex m	198
10.5	Ex s	199
10.6	Multiple-certification	202
10.7	Selection of certification method	204
10.8	Equipment certified for dust	205
10.9	Conclusion	206

11	Earthing and Bonding	207
11.1	Earthing	207
11.2	Personnel safety	208
11.3	Hazardous area considerations	209
11.4	Earthing and bonding	210
11.5	Static electricity	213
11.6	Clean and dirty earthing	215
11.7	Electrical interference	216
11.8	Earthing terminology	218
11.9	Connection of earthing systems	221
11.10	Power supply systems	223
11.11	Portable equipment using batteries	225
11.12	Earthing arrangement standard solutions	226
11.13	Earth loops	228
11.14	Computer earthing	229
11.15	Surge protection systems	232
11.16	Summary	234
12	Installations	235
12.1	Introduction	235
12.2	General	237
12.3	IEC 60079-14: 2013 contents	238
12.4	Other relevant installation standards and codes	239
12.5	General requirements of the standard	239
12.6	Selection of electrical equipment	242
12.7	Dusts	245
12.8	Electrical supply systems	248
12.9	Commissioning	252
12.10	Installed arrangements	252
12.11	Summary	253
13	Inspection and Maintenance	255
13.1	Introduction	255
13.2	Standards	255
13.3	Scope of IEC 60079-17	257
13.4	Definitions	257
13.5	Layout of the standard	258
13.6	Types of protection	262
13.7	Insulation testing	262
13.8	Maintenance	263
13.9	Testing	264
13.10	Unauthorised modification	264
13.11	Earthing integrity verification	265
13.12	Need for inspection and maintenance	265
13.13	IEC inspection tables	272
14	Safe Working Practices	279
14.1	Introduction	279
14.2	Risk assessment	280
14.3	General rules	280
14.4	Danger signals of electrical malfunctioning	281

14.5	Recording of incidents and observations	282
14.6	Maintenance and safe practices	282
14.7	Training of personnel	285
14.8	Electrical fire and shock	285
14.9	Summary	286
15	Fault Finding and Testing	287
15.1	Fault finding	287
15.2	Fault finding routine	287
15.3	Electrical testing in hazardous area	289
15.4	Earth testing in a hazardous area	292
15.5	Repairs	295
15.6	Competency assessment	295
15.7	Summary	295
16	Standards, Certification, Marking, ATEX and DSEAR	297
16.1	Introduction	297
16.2	Progression of standards	297
16.3	A brief history of certification and approval	299
16.4	Types of certificates	300
16.5	Combined protection	302
16.6	Approval versus Certification	303
16.7	The IEC-Ex scheme	303
16.8	Conclusion	304
16.9	Course Conclusion	305
Appendix A – IEC Series Standard Titles for Explosive Atmospheres		307
Appendix B – Ingress Protection Code for Enclosures of Electrical Equipment		311
Appendix C – Case Studies		315
Appendix D – Hazardous Area Classification Tabulation Format taken from IEC60079-10		317
Appendix E – Practical Exercises for Hazardous Areas Course		323
Appendix F – ATEX: European Directives		343
Appendix G – DSEAR: Dangerous Substances and Explosive Atmospheres Regulations applied in the UK		371
