

Technology Training that Works

Practical Hazardous Areas for Engineers and Technicians

Contents

<i>Preface</i>		<i>i</i>
1	Introduction	1
1.1	Introduction	1
1.2	Definitions	2
1.3	Investigation after accidents and disasters	4
1.4	History	5
1.5	Equipment certification	9
1.6	Conclusion	10
2	Flammability Characteristics, Ignition Sources and the Use of Electricity	11
2.1	Flammability	11
2.2	Flammability information (gasses and vapours)	16
2.3	Dusts	17
2.4	Theory into practice	20
2.5	General sources of ignition	20
2.6	Use of electricity and its sources of ignition	21
2.7	Electrical protection (as opposed to explosion protection)	24
2.8	Toxicity hazard	25
2.9	Conclusions	25
3	Area Classification	27
3.1	General	27
3.2	Overview of the principles of safety	28
3.3	Definitions	28
3.4	The process of assessment	29
3.5	Normal and abnormal operation	32
3.6	Classification into zones	33
3.7	Area classification process	35
3.8	Openings	37
3.9	Ventilation	39
3.10	HAC calculation	41
3.11	Area classification of dust hazards	48
3.12	Responsibility and personnel involved	49
3.13	Documentation	49
3.14	Policy and guidelines for implementation	51

Technology Training that Works

3.15	General information	52
3.16	Area classification standards	53
3.17	HAC examples	54
3.18	Dusts	56
3.19	Classification in North America	57
3.20	Conclusions	58
4	Explosion Protection Philosophy and Equipment Classification Systems	59
4.1	General	59
4.2	Classification concepts	60
4.3	Introduction to equipment certification	60
4.4	Temperature classification	61
4.5	Equipment grouping	63
4.6	Types of explosion protection	67
4.7	Overview of explosion protection theory	68
4.8	Brief comparison of types of protection	69
4.9	Mixed techniques	75
4.10	Dust explosion protection methods	75
4.11	Selection of the type of explosion protection	76
4.12	Conclusion	77
5	Protection Concepts: Type of Protection; 'd'	79
5.1	Name	79
5.2	Standards	79
5.3	Definition	80
5.4	Principle of operation	80
5.5	Types of flamepath joint and uses	83
5.6	Explosion pressure	87
5.7	Certification	88
5.8	Cabling requirements for Ex d	89
5.9	Design and type-testing	94
5.10	Installation and conditions of use	95
5.11	Regional variations in Ex d implementation	97
5.12	Illustrations of mechanical construction	97
5.13	Summary	100
6	Protection Concept 'e'	101
6.1	Name	101
6.2	Standards	101
6.3	Definitions	102
6.4	Principles of design for increased safety	102
6.5	Component certification	104
6.6	Internal requirements of Ex e	105
6.7	Ex e enclosures	106
6.8	Rotating electrical machines	107

Technology Training that Works

6.9	Cable and glanding requirements	109
6.10	Periodic inspection requirements	111
6.11	Marking	111
6.12	Applications	112
6.13	Summary	113
7	Protection Concept 'n'	115
7.1	Name	115
7.2	Standards	115
7.3	Definitions	117
7.4	Principles of design	118
7.5	Construction	119
7.6	Additional means of protection	120
7.7	Applications	124
7.8	Installation	125
7.9	Inspection	126
7.10	Live working	126
8	Protection Concept 'i' Principles	127
8.1	Name	127
8.2	Standards	127
8.3	Definition	127
8.4	Origins of intrinsic safety	128
8.5	Principles	128
8.6	Electrical theory	130
8.7	Implementation of IS	136
8.8	The shunt diode safety barrier	140
8.9	Associated apparatus	151
8.10	Electrical apparatus in the hazardous area	153
8.11	Enclosures	160
8.12	Temperature	160
8.13	The Ex i systems concept	161
8.14	An Ex i 'system'	161
8.15	Assessment of safety	161
8.16	Simple apparatus	163
8.17	Safety parameters	163
8.18	Temperature classification of systems	164
8.19	Systems concepts in other standards	164
8.20	Conclusion	164
9	Protection Concept Ex p	165
9.1	Name	165
9.2	Standards	165
9.3	Principle of operation	167
9.4	Purging	169

Technology Training that Works

9.5	Pressurisation	171
9.6	Variations	171
9.7	Application notes	174
9.8	Certification and documentation	176
9.9	Pressure / Flow failure	176
9.10	Ex p protection type px, py and pz	178
9.11	Conclusion	179
<hr/>		
10	Other types of Ex Protection and their use in Combination	181
<hr/>		
10.1	General	181
10.2	Ex o	181
10.3	Ex q	183
10.4	Ex m	184
10.5	Ex s	185
10.6	Multiple-certification	188
10.7	Selection of certification method	190
10.8	Equipment certified for dust	190
10.9	Conclusion	191
<hr/>		
11	Earthing and Bonding	193
<hr/>		
11.1	Earthing	193
11.2	Personnel safety	194
11.3	Hazardous area considerations	195
11.4	Earthing and bonding	196
11.5	Static electricity	199
11.6	Clean and dirty earthing	201
11.7	Electrical interference	202
11.8	Earthing terminology	204
11.9	Connection of earthing systems	207
11.10	Power supply systems	209
11.11	Portable equipment using batteries	211
11.12	Earthing arrangement standard solutions	211
11.13	Earth loops	214
11.14	Computer earthing	215
11.15	Surge protection systems	218
11.16	Summary	220
<hr/>		
12	Installations	221
<hr/>		
12.1	Introduction to installations	221
12.2	Selection and installation in general	222
12.3	IEC 60079-14: 2007 contents	224
12.4	Other relevant installation standards and codes	224
12.5	Verification dossier	225
12.6	General requirements of the standard	225
12.7	Selection of electrical equipment	228
12.8	Dusts	232
12.9	Electrical supply systems	234

Technology Training that Works

12.10	Commissioning	238
12.11	Installed arrangements	238
12.12	Summary	240
13	Inspection and Maintenance	241
13.1	Introduction	241
13.2	Standards	241
13.3	Scope of IEC 60079-17	243
13.4	Definitions	243
13.5	Layout of the standard	244
13.6	Types of protection	247
13.7	Insulation testing	248
13.8	Maintenance	249
13.9	Testing	250
13.10	Unauthorised modification	250
13.11	Earthing integrity verification	250
13.12	Need for inspection and maintenance	251
13.13	IEC inspection tables	257
14	Safe Working Practices	263
14.1	Introduction	263
14.2	Risk assessment	264
14.3	General rules	264
14.4	Danger signals of electrical malfunctioning	265
14.5	Recording of incidents and observations	266
14.6	Maintenance and safe practices	266
14.7	Training of personnel	269
14.8	Electrical fire and shock	269
14.9	Summary	270
15	Fault Finding and Testing	271
15.1	Fault finding	271
15.2	Fault finding routine	271
15.3	Electrical testing in hazardous area	273
15.4	Earth testing in a hazardous area	276
15.5	Repairs	277
15.6	Competency assessment	279
15.7	Summary	279
16	Standards, Certification, Marking, ATEX and DSEAR	281
16.1	Introduction	281
16.2	Harmonisation of standards	281
16.3	A brief history of certification and approval	282
16.4	Introduction to ATEX	285
16.5	Product directive	286
16.6	Bird's eye view of ATEX product directive	301
16.7	Summary of marking	307

Technology Training that Works

16.8	The workers directive	307
16.9	Dangerous substances and explosive atmospheres regulations	310
16.10	Summary	311
16.11	Conclusion	311

Appendix A – IEC Series Standard Titles for Explosive Atmospheres 313

Appendix B – Ingress Protection Code for Enclosures of Electrical Equipment 321

Appendix C – Case Studies 323

Appendix D – Hazardous Area Classification Tabulation Format taken from IEC60079-10 325

Appendix E – Practical Exercises 329
