

Technology Training that Works Contents i

Practical Industrial Networking for Engineers & Technicians

Contents

1	Introduction to Ethernet	1
1.1	Introduction	1
1.1.1	The birth of Ethernet	2
1.1.2	Developments through the Eighties and Nineties	2
1.1.3	Semantics – which Ethernet are we talking about?	3
1.2	Standards and Standards Institutions	3
1.2.1	Standards institutions	3
1.2.2	Compliance with standards	4
1.3	Networking basics – an overview	4
1.3.1	Network definition	4
1.3.2	Classifications of computer networks	4
1.3.3	Classification based on transmission technology	4
1.3.4	Classification based on geographical area covered	5
1.4	Interoperability and internetworking	5
1.5	Network architecture and protocols	6
1.6	Layer design parameters	7
1.7	Entities, SAPs, IDUs/ SDUs	7
1.8	Connectionless and connection-oriented service	7
1.9	Reference Models	8
1.9.1	Open systems interconnection (OSI) model	8
1.9.2	Functions of the OSI model layers	10
1.9.3	The TCP/IP reference model	12
1.10	OSI layers and IEEE layers	13
1.11	Network topologies	14
1.11.1	Broadcast and point-to-point topologies	14
1.11.2	Logical and physical topologies	15
1.11.3	Hybrid technologies	18
1.12	Network communication	22
1.12.1	Circuit switched data	22
2	Data communications and network communications	25
2.1	Introduction	25
2.2	Bits, bytes, characters, and codes	26
2.2.1	Data coding	26

Technology Training that Works Contents ii

2.3	Communication principles	30
2.3.1	Communication modes	30
2.3.2	Synchronization of digital data signals	31
2.4	Transmission characteristics	33
2.4.1	Signaling rate (or baud rate)	33
2.4.2	Data rate	33
2.4.3	Bandwidth	33
2.4.4	Signal to noise ratio	33
2.4.5	Data throughput	34
2.4.6	Error rate	34
2.5	Error correction	34
2.5.1	Origins of errors	34
2.5.2	Factors affecting signal propagation	34
2.5.3	Types of error detection, control and correction	37
2.6	Encoding methods	43
2.6.1	Manchester encoding	43

3	Operation of Ethernet systems	47
3.1	Introduction	47
3.1.1	Logical link control (LLC) sublayer	48
3.1.2	MAC sublayer	48
3.2	IEEE/ISO standards	48
3.2.1	Internetworking	48
3.3	Ethernet frames	52
3.3.1	DIX and IEEE 802.3 frames	52
3.3.2	Preamble	53
3.3.3	Ethernet MAC addresses	53
3.3.4	Destination address	54
3.3.5	Source address	54
3.3.6	Type/length field	55
3.3.7	Use of type field for protocol identification	55
3.3.8	Data field	56
3.3.9	Frame check sequence (FCS) field	56
3.4	LLC frames and multiplexing	57
3.4.1	LLC frames	57
3.4.2	LLC and multiplexing	57
3.5	Media access control for half-duplex LANs (CSMA/CD)	58
3.5.1	Terminology of CSMA/CD	59
3.5.2	CSMA/CD access mechanism	59

Technology Training that Works Contents iii

3.5.3	Slot time, minimum frame length, and network diameter	60
3.5.4	Collisions	61
3.6	MAC (CSMA-CD) for gigabit half-duplex networks	62
3.7	Multiplexing and higher level protocols	62
3.8	Full-duplex transmissions	62
3.8.1	Features of full-duplex operation	63
3.8.2	Ethernet flow control	63
3.8.3	MAC control protocol	63
3.8.4	PAUSE operation	64
3.9	Auto-negotiation	64
3.9.1	Introduction to auto-negotiation	64
3.9.2	Signaling in auto-negotiation	65
3.9.3	FLP details	65
3.9.4	Matching of best capabilities	66
3.9.5	Parallel detection	67
3.10	Deterministic Ethernet	67

4 Physical layer implementations of Ethernet media systems

69

4.1	Introduction	69
4.2	Components common to all media	70
4.2.1	Attachment unit interface (AUI)	70
4.2.2	Medium-independent interface (MII)	71
4.2.3	Gigabit medium-independent interface (GMII)	72
4.3	10 Mbps media systems	73
4.3.1	10Base5 systems	73
4.3.2	10Base2 systems	75
4.3.3	10BaseT	76
4.3.4	10BaseF	77
4.3.5	Obsolete systems	79
4.3.6	10 Mbps design rules	79
4.4	100 Mbps media systems	81
4.4.1	Introduction	81
4.4.2	100BaseT (100BaseTX, T4, FX, T2) systems	82
4.4.3	IEEE 802.3u 100BaseT standards arrangement	83
4.4.4	Physical medium independent (PHY) sub layer	84
4.4.5	100BaseTX and FX physical media dependent (PMD) sub-layer	85

Technology Training that Works Contents iv

4.4.6	100BaseT4 physical media dependent (PMD) sub-layer	85
4.4.7	100BaseT2	86
4.4.8	100BaseT hubs	87
4.4.9	100BaseT adapters	87
4.4.10	100 Mbps/fast Ethernet design considerations	88
4.5	Gigabit/1000 Mbps media systems	89
4.5.1	Gigabit Ethernet summary	89
4.5.2	Gigabit Ethernet MAC layer	90
4.5.3	Physical medium independent (PHY) sub layer	91
4.5.4	1000BaseSX for horizontal fiber	92
4.5.5	1000BaseLX for vertical backbone cabling	92
4.5.6	1000BaseCX for copper cabling	92
4.5.7	1000BaseT for category 5 UTP	92
4.5.8	Gigabit Ethernet full-duplex repeaters	94
4.5.9	Gigabit Ethernet design considerations	94
4.6	10 Gigabit Ethernet systems	96
4.6.1	The 10 Gigabit Ethernet project and its objectives	96
4.6.2	Architecture of 10-gigabit Ethernet standard	96
4.6.3	Chip interface (XAUI)	97
4.6.4	Physical media dependent (PMDs)	98
4.6.5	Physical layer (PHYs)	98
4.6.6	10 Gigabit Ethernet applications in LANs	99
4.6.7	10 Gigabit Ethernet metropolitan and storage area networks	99
4.6.8	10 Gigabit Ethernet in wide area networks	100
4.6.9	Conclusion	100

5	Ethernet cabling and connectors	103
5.1	Cable types	103
5.2	Cable structure	104
5.2.1	Conductor	104
5.2.2	Insulation	104
5.3	Factors affecting cable performance	105
5.3.1	Attenuation	106
5.3.2	Characteristic impedence	106
5.3.3	Crosstalk	106
5.4	Selecting cables	108
5.4.1	Function and location	108

Technology Training that Works Contents v

5.4.2	Main cable selection factors	109
5.5	AUI cable	109
5.6	Coaxial cables	110
5.6.1	Coaxial cable construction	110
5.6.2	Coaxial cable performance	111
5.6.3	Thick coaxial cable	111
5.6.4	Thin coaxial cable	112
5.6.5	Coaxial cable designations	112
5.6.6	Advantages of a coaxial cable	112
5.6.7	Disadvantages of coaxial cable	113
5.6.8	Coaxial cable faults	113
5.7	Twisted pair cable	113
5.7.1	Elimination of noise by signal inversion	114
5.7.2	Components of twisted pair cable	115
5.7.3	Shielded twisted pair (STP) cable	115
5.7.4	Unshielded twisted pair (UTP) cable	115
5.7.5	EIA/TIA 568 cable categories	118
5.7.6	Category 3, 4 and 5 performance features	119
5.7.7	Advantages of twisted pair cable	122
5.7.8	Disadvantages of twisted pair cable	122
5.7.9	Selecting and installing twisted pair cable	122
5.8	Fiber optic cable	123
5.8.1	Theory of operation	123
5.8.2	Multimode fibers	124
5.8.3	Monomode/single mode fibers	125
5.8.4	Fiber optic cable components	127
5.8.5	Fiber core refractive index changes	129
5.9	The IBM cable system	131
5.9.1	IBM type 1 cable specifications	132
5.10	Ethernet cabling requirement overview	132
5.11	Cable connectors	134
5.11.1	AUI cable connectors	134
5.11.2	Coaxial cable connectors	134
5.11.3	UTP cable connectors	138
5.11.4	Connectors for fiber optic cables	144

Technology Training that Works Contents vi

6	LAN system components	147
6.1	Introduction	147
6.2	Repeaters	148
6.2.1	Packaging	148
6.2.2	Local Ethernet repeaters	148
6.2.3	Remote repeaters	149
6.3	Media converters	149
6.4	Bridges	150
6.4.1	Intelligent bridges	150
6.4.2	Source-routing bridges	151
6.4.3	SRT and translational bridges	151
6.4.4	Local vs. remote bridges	152
6.5	Hubs	152
6.5.1	Desktop vs stackable hubs	152
6.5.2	Shared vs. switched hubs	153
6.5.3	Managed hubs	153
6.5.4	Segmentable hubs	154
6.5.5	Dual-speed hubs	154
6.5.6	Modular hubs	154
6.5.7	Hub interconnection	154
6.6	Switches	155
6.6.1	Cut-through vs store-and-forward	156
6.6.2	Layer 2 switches vs. layer 3 switches	156
6.6.3	Full duplex switches	156
6.6.4	Switch applications	156
6.7	Routers	159
6.7.1	Two-port vs. multi-port routers	160
6.7.2	Access routers	160
6.7.3	Border routers	160
6.7.4	Routing vs. bridging	161
6.8	Gateways	161
6.9	Print servers	161
6.10	Terminal servers	162
6.11	Thin servers	162
6.12	Remote access servers	163
6.13	Network timeservers	164

Technology Training that Works Contents vii

7	Structured cabling	165
7.1	Introduction	165
7.2	TIA/EIA cabling standards	166
7.3	Components of structured cabling	167
7.4	Star topology for structured cabling	168
7.5	Horizontal cabling	168
	7.5.1 Cables used in horizontal cabling	168
	7.5.2 Telecommunication outlet/connector	168
	7.5.3 Cross-connect patch cables	169
	7.5.4 Horizontal channel and basic link as per TIA/EIA telecommunication system bulletin 67 (TSB- 67)	169
	7.5.5 Documentation and identification	169
7.6	Fiber-optics in structured cabling	170
	7.6.1 Advantages of fiber-optic technology	170
	7.6.2 The 100 meter limit	171
	7.6.3 Present structured cabling topology as per TIA/EIA	172
	7.6.4 Collapsed cabling design alternative	172
	7.6.5 Centralized cabling design alternative	172
	7.6.6 Fiber zone cabling – mix of collapsed and centralized cabling approaches	173
	7.6.7 New next generation products	173
8	Multi-segment configuration guidelines for half-duplex Ethernet systems	175
8.1	Introduction	175
8.2	Defining collision domains	176
8.3	Model I configuration guidelines for 10 Mbps systems	177
8.4	Model II configuration guidelines for 10 Mbps	178
	8.4.1 Models of networks and transmission delay values	178
	8.4.2 The worst-case path	179
	8.4.3 Calculating the round-trip delay time	180
	8.4.4 The inter-frame gap shrinkage	180
8.5	Model 1-configuration guidelines for fast Ethernet	181
	8.5.1 Longer inter-repeater links	183
8.6	Model 2 configuration guidelines for fast Ethernet	184
	8.6.1 Calculating round-trip delay time	184
	8.6.2 Calculating segment delay values	186

Technology Training that Works Contents viii

8.6.3	Typical propagation values for cables	187
8.7	Model 1 configuration guidelines for Gigabit Ethernet	187
8.8	Model 2 configuration guidelines for Gigabit Ethernet	188
8.8.1	Calculating the path delay value	188
8.9	Sample network configurations	189
8.9.1	Simple 10 Mbps model 2 configurations	189
8.9.2	Round-trip delay	189
8.9.3	Inter-frame gap shrinkage	190
8.9.4	Complex 10 Mbps Model 2 configurations	190
8.9.5	Calculating separate left end values	191
8.9.6	AUI delay value	191
8.9.7	Calculating middle segment values	191
8.9.8	Completing the round-trip timing calculation	192
8.9.9	Inter-frame gap shrinkage	193
8.9.10	100 Mbps model 2 configuration	193
8.9.11	Worst-case path	193
8.9.12	Working with bit time values	195
9	Industrial Ethernet	197
9.1	Introduction	197
9.2	Connectors and cabling	197
9.3	Packaging	199
9.4	Deterministic versus stochastic operation	200
9.5	Size and overhead of Ethernet frame	201
9.6	Noise and interference	201
9.7	Partitioning of the network	201
9.8	Switching technology	201
9.9	Power on the bus	203
9.10	Fast and Gigabit Ethernet	203
9.11	TCP/IP and industrial systems	203
9.12	Industrial Ethernet architectures for high availability	204
10	Network protocols, part one – Internet Protocol (IP)	207
10.1	Overview	208
10.2	Internet protocol version 4 (IPv4)	208
10.2.1	Source of IP addresses	208
10.2.2	The purpose of the IP address	209
10.2.3	IPv4 address notation	209

Technology Training that Works Contents ix

10.2.4 Network ID and host ID	210
10.2.5 Address classes	210
10.2.6 Determining the address class by inspection	211
10.2.7 Number of networks and hosts per address class	211
10.2.8 Subnet masks	212
10.2.9 Subnetting	213
10.2.10 Private vs Internet-unique IP addresses	215
10.2.11 Classless addressing	215
10.2.12 Classless Inter-Domain Routing (CIDR)	216
10.2.13 IPv4 header structure	218
10.2.14 Packet fragmentation	221
10.3 Internet Protocol version 6 (IPv6/ IPng)	223
10.3.1 Introduction	223
10.3.2 IPv6 Overview	223
10.3.3 IPv6 header format	224
10.3.4 IPv6 extensions	226
10.3.5 IPv6 addresses	227
10.3.6 Flow labels	231
10.4 Address Resolution Protocol (ARP)	232
10.4.1 Address Resolution Protocol Cache	233
10.4.2 ARP header	234
10.4.3 Proxy ARP	235
10.4.4 Gratuitous ARP	236
10.5 Reverse Address Resolution Protocol (RARP)	236
10.6 Internet Control Message Protocol (ICMP)	237
10.6.1 ICMP Message structure	237
10.6.2 ICMP applications	237
10.6.3 Source quench	239
10.6.4 Redirection messages	239
10.6.5 Time exceeded messages	240
10.6.6 Parameter problem messages	241
10.6.7 Unreachable destination	241
10.6.8 ICMP query messages	242
10.7 Routing protocols	243
10.7.1 Routing basics	243
10.7.2 Direct vs indirect delivery	244
10.7.3 Static versus dynamic routing	244

Technology Training that Works Contents x

10.7.4 Autonomous systems	245
10.7.5 Interior, exterior and gateway-to-gateway protocols	246
10.8 Interior gateway protocols	247
10.9 Exterior gateway protocols (EGPs)	249
10.9.1 BGP-4	249

11	Network protocols part two – TCP, UDP, IPX/SPX, NetBIOS/NetBEUI and Modbus/TCP	251
11.1	Transmission control protocol (TCP)	251
11.1.1	Basic functions	251
11.1.2	Ports	252
11.1.3	Sockets	252
11.1.4	Sequence numbers	252
11.1.5	Acknowledgement numbers	253
11.1.6	Sliding windows	254
11.1.7	Establishing a connection	255
11.1.8	Closing a connection	256
11.1.9	The push operation	256
11.1.10	Maximum segment size	256
11.1.11	The TCP frame	257
11.2	User datagram protocol (UDP)	259
11.2.1	Basic functions	259
11.3	IPX/SPX	260
11.3.1	Internet packet exchange (IPX)	260
11.3.2	Sequenced packet exchange (SPX)	261
11.4	NetBIOS and NetBEUI	263
11.4.1	Overview	263
11.4.2	NetBIOS application services	263
11.5	Modbus protocol	266
11.5.1	Introduction	266
11.5.2	Transactions on Modbus networks	268
11.5.3	Transactions on other kinds of networks	269
11.5.4	The query-response cycle	269
11.5.5	Modbus ASCII and RTU transmission modes	270
11.5.6	Modbus message framing	271
11.6	Modbus/TCP	276
11.6.1	Modbus/TCP advantages	277
