

Technology Training that Works

Practical Intrinsic Safety for Engineers and Technicians

Contents

1	Introduction	1
1.1	General introduction to explosion protection	1
1.2	Historical background to explosion protection	1
1.3	Scope of protection systems	2
1.4	Responsibility	3
1.5	Explosion of protection and certification	3
1.6	Legality	4
1.7	The role of standards and certification	4
2	Definitions and Terminology	5
2.1	Definitions and terminology	5
2.2	Protection concepts	5
2.3	Principles of ignition	6
2.4	Electricity as a source of ignition	7
2.5	Properties of flammable materials	7
2.6	Other relevant properties of flammable materials	10
2.7	Other properties affecting general safety	10
2.8	Summary	11
2.9	Classification system	11
2.10	Classification concepts	12
2.11	Area classification locations	18
2.12	Summary of area classification	21
2.13	Methods of explosion protection	22
2.14	Classification of equipment for use in hazardous areas	22
2.15	Certification	23
2.16	Dusts	23
3	Principles of Intrinsic Safety	27
3.1	Origins of intrinsic safety	27
3.2	Principles of IS	28
3.3	Electrical theory to explain IS	29
3.4	Implementation of IS	36
3.5	The shunt diode safety barrier	40
3.6	Associated apparatus	51
3.7	Electrical apparatus in the hazardous area	53
3.8	Simple apparatus or certified apparatus	54
3.9	Enclosures	60
3.10	Temperature	60
4	Systems Concepts	63
4.1	The IS systems concept	63
4.2	An IS 'system'	63

Technology Training that Works

4.3	System documentation	64
4.4	Assessment of safety	65
4.5	Simple apparatus	66
4.6	Safety parameters	66
4.7	Temperature classification of systems	67
4.8	Systems concepts in other standards	68
4.9	Conclusion to systems	68
5	Types of Explosion Protection	69
5.1	Methods of explosion protection	69
5.2	Separation	71
5.3	Construction	75
5.4	Containment	78
5.5	Electrical design	80
5.6	Special	80
5.7	Multiple certification	81
5.8	Selection of certification method	82
5.9	Perceived advantages of IS	82
6	Earthing Systems	85
6.1	Earthing	85
6.2	Personal safety	85
6.3	Hazardous area considerations	87
6.4	Earthing and bonding	88
6.5	Static electricity	90
6.6	Clean and dirty earthing	93
6.7	Electrical Interference	94
6.8	Earthing terminology	96
6.9	Connection of earthing systems	98
6.10	Power supply systems	101
6.11	Portable equipment using batteries	103
6.12	Earthing arrangement standard solutions	103
6.13	Earth loops	106
6.14	Computer earthing	106
6.15	Surge protection systems	110
6.16	Standards and codes of practice	112
7	Installations	113
7.1	Introduction to installation requirements	113
7.2	Installation requirements	114
7.3	IEC79-14: Standard contents	114
7.4	Other relevant installation standards and codes	115
7.5	Safety documentation	115
7.6	General requirements of the standard	116
7.7	Practical aspects of IS installations	121
7.8	Other considerations affecting installation	134
7.9	Other installation issues	134

Technology Training that Works

8	Inspection and Maintenance	137
8.1	Inspection and maintenance	137
8.2	Integrity 'preserved'	138
8.3	Scope of IEC79-17	138
8.4	General requirements	139
8.5	Inspections	139
8.6	The insulation test	141
8.7	Maintenance	142
8.8	Testing	146
8.9	Unauthorised modification	147
8.10	Earthing integrity verification	147
8.11	BS5345 inspection requirements	147
9	Standards and Certification	151
9.1	Standards and certification	151
9.2	Definition of a standard	151
9.3	Standards for IS	152
9.4	The European 'ATEX' directive	155
9.5	The international standards organisation	158
9.6	Certification	158
9.7	Safety documentation	164
9.8	Marking of apparatus	165
9.9	Example discussed	167
10	Fault Finding	169
10.1	Fault finding	169
10.2	Fault-finding routine	169
10.3	Safety assessment of testing	171
10.4	Test equipment	171
10.5	Use of uncertified test apparatus	174
10.6	Interface testing	178
10.7	Certified apparatus	181
10.8	IS apparatus repair procedure	181
11	Applications	185
	<i>Applications</i>	185
11.1	Loop device selection	185
11.2	Terminology	186
	<i>Status inputs</i>	187
11.3	Switch conventions	187
11.4	Circuit faults	188
11.5	Relay objects	189
11.6	IS switch status	189
11.7	Switch transfer using galvanic isolators	193
11.8	Switch input criticality	196
11.9	Proximity switches	197
11.10	Intrinsic safety aspects of switches	197
11.11	Summary	198

Technology Training that Works

	<i>Analogue applications</i>	198
11.12	High-level signals	198
11.13	The 4/20mA transmitter	198
11.14	Operational characteristics	199
11.15	Transmitter operational characteristics	200
11.16	Smart transmitters	201
11.17	Safety parameters	201
11.18	Marking	201
11.19	Safety assessment	202
	<i>Transmitter loops with interfaces</i>	202
11.20	Single channel barriers	202
11.21	Two channel barrier solutions	205
11.22	Referencing 'common' connections with barrier systems	208
11.23	Safety considerations	208
	<i>Active barriers</i>	209
11.24	Active vs passive barriers	209
	<i>Analogue galvanic isolation</i>	210
11.25	Principles of operation	210
11.26	Functional aspects	211
11.27	Non-energy storing input	211
	<i>Loop applications</i>	212
11.28	Safety aspects	213
	<i>Applications concepts</i>	213
11.29	Power supply connection to interfaces	214
11.30	Earth return of faults	220
	<i>Temperature measurement</i>	220
11.31	Thermocouples	220
11.32	Resistance thermometry	226
11.33	Two-wire high resistance elements	233
11.34	RTDs with galvanic isolating interfaces	233
11.35	Temperature convertors	233
11.36	Temperature multiplexing	234
11.37	Strain gauge bridges	236
11.38	Isolators in combination	240
	<i>Channel function concept</i>	241
11.39	Power supply	242
11.40	Isolator supply techniques	243
11.41	Higher power techniques	244
11.42	Higher power IS channel interfaces	244
	<i>The solenoid valve</i>	244
11.43	Safety characteristics	245
11.44	Solenoid valve operation	246
11.45	Operation of barriers with SVs	246
11.46	Application techniques	246
11.47	Operation of isolating drivers with SVs	247
	<i>Analogue outputs</i>	247
11.48	I/P convertors	247
11.49	Operational detail	248

Technology Training that Works

11.50	Controller analogue output modules	248
	<i>Vibration monitoring</i>	249
11.51	Pulse signal transmission	249
11.52	Conductivity and pH	250
	<i>Techniques for operating through hazardous areas</i>	250
11.53	Safety considerations of transfer across hazardous areas	250
11.54	Data communications	252
11.55	Communication techniques	253
11.56	Combined voltage and current	254
11.57	Multi-dropping	255
	<i>I/O systems</i>	256
11.58	Redundancy	257
	<i>HART systems</i>	260
11.59	HART monitoring systems	261
	<i>Fieldbus concepts with IS</i>	261
	<i>Selection of apparatus and interfaces</i>	263
11.60	Determination of important criteria	263
11.61	Barrier vs isolator philosophy	264
11.62	Option selection	265

Appendix A	IEC Series Standard Titles	267
------------	----------------------------	-----

Appendix B	List of IS Standards and Codes of Practice by Country	269
------------	---	-----

Appendix C	IEC79 Ex i Inspection Schedule	271
------------	--------------------------------	-----

Appendix D	CENELEC Members	273
------------	-----------------	-----

Appendix E	IP Code	275
------------	---------	-----

Appendix F	Standards Reference	277
------------	---------------------	-----

Appendix G	Other Reference Documents	279
------------	---------------------------	-----

Appendix H	European and International Standards	281
------------	--------------------------------------	-----

Appendix I	Practical Exercises	287
