

Technology Training that Works

Practical Tuning of Industrial Control Loops

Contents

Foreword	xiii
----------	------

Chapter 1— Introduction	1
1.1 Introduction	1
1.2 Process dynamics	3
1.3 Process time constants	8
1.4 Basic definitions & terms used in process control	13
1.5 Types or modes of operation of available control systems	13
1.6 Closed loop controller and process gain calculations	16
1.7 Proportional, integral and derivative control modes	16
1.8 An introduction to cascade control	17

Chapter 2— Fundamentals of control systems	19
2.1 Introduction	19
2.2 The terminology in control	20
2.3 Basic concepts of control	21
2.4 Classification control	24
2.5 Modes of feedback control	33
2.6 Reverse or direct acting controllers	55
2.7 Stability of feedback control	58
2.8 Open loop characterization of the process	64

Chapter 3— Fundamentals of tuning PID controllers	71
3.1 Introduction	72
3.2 Default and typical settings	73
3.3 Quick and easy open loop control tuning methods	74
3.4 The general purpose closed looped tuning methods	83
3.5 Fine tuning different processes	92
3.6 PID equations: Dependent and independent gains	94

Chapter 4— Different tuning rules available	95
4.1 Introduction	95
4.2 Different tuning rules compared	96
4.3 Controllability of processes	105
4.4 Flow loops	106

Technology Training that Works

4.5	A few general suggestions on when to use them/when not to use them	109
4.6	28 Rules of thumb in tuning	110
4.7	Auto tuning methods	112
<hr/>		
Chapter 5— Cascade control		123
<hr/>		
5.1	Definitions of cascade control	123
5.2	Advantages of using cascade control	125
5.3	Selecting controller modes	126
5.4	The concept of process variable or PV-tracking	128
5.5	Initialization of a cascade system	128
5.6	Equations relating to controller configurations	128
5.7	Application notes on the use of equation types	131
5.8	Tuning of a cascade control system	133
5.9	Cascade control with multiple secondaries	137
5.10	Multiple output calculations	137
<hr/>		
Chapter 6— Feedforward and ratio control		139
<hr/>		
6.1	Introduction to feedforward and ratio control	139
6.2	Designing linear feedforward controllers	150
6.3	Tuning linear feedforward controllers	152
6.4	Non-linear feedforward compensation	161
<hr/>		
Chapter 7— Long process deadtime in closed loop control		167
<hr/>		
7.1	Process deadtime	167
7.2	An example of process deadtime	168
7.3	The Smith predictor model	170
7.4	The Smith predictor in theoretical use	171
7.5	The Smith predictor in reality	172
7.6	An exercise in deadtime compensation	172
<hr/>		
Chapter 8— Auto tuning and self tuning controllers		175
<hr/>		
8.1	The need for adaptive control	175
8.2	Process nonlinear ties	176
8.3	Adaptive control using preset compensation	177
8.4	Self-tuning controllers	180
8.5	Adaptive control using pattern recognition	182
8.6	Implementation requirements for self tuning controllers	184
8.7	Adaptive control using discrete parameter estimation	185
8.8	The adapter and tuning formulas	188
8.9	Self-tuning versus adaptive control	188

Technology Training that Works

Chapter 9— Good practices and troubleshooting in tuning	189
9.1 The control objective	189
9.2 Flow control	190
9.3 Pressure and level control	190
9.4 Temperature control	192
9.5 Composition control	192
9.6 Cascade control tuning	193
9.7 Troubleshooting and diagnostics in controller tuning	194
9.8 The practical limitations in the tuning of a control loop	195

Appendix A— Glossary	197
Appendix B— Process measurement and transducers	217
Appendix C— Laplace transforms and block diagrams	259
Appendix D— Digital control principles	267
Appendix E— Real and digital PID controllers	279
Appendix F— Basic principles of control valves and actuators	285
Appendix G— Getting started with PC-ControlLAB	319
Appendix H— Practical sessions	325
