

Technology Training that Works

Lightning, Surge Protection & Earthing of Electrical & Electronic Systems in Industrial Networks

Contents

1	Overview	1
	1.1 Lightning and its effects	1
	1.2 Lightning protection system for a building or structure	3
	1.3 Lightning detection and warning systems	4
	1.4 Role of grounding in lightning protection systems	5
	1.5 Bonding of grounding systems	5
	1.6 Surge protection	6
	1.7 Maintenance of lightning protection systems	7
	1.8 Additional information	7
2	Lightning physics, effects and risk assessment	9
	2.1 The Physics of Lightning	10
	2.2 Incidence of lightning strikes	17
	2.3 Probability of a lightning strike	23
	2.4 Effect of lightning strike on objects on the ground	25
	2.5 Indirect effects of lightning	28
	2.6 Effect of lightning strike on electrical installations	30
	2.7 Assessment of lightning risk	30
	2.8 Summary	34
3	Lightning safety	37
	3.1 Human safety aspects	37
	3.2 Risk of lightning strike - statistics	38
	3.3 Personnel safety measures against lightning strike	40
	3.4 Importance of lightning detection	42
	3.5 National Lightning Detection Network (NLDN) TM – an overview	42
	3.6 Sensors for detection in areas not covered by LDN	44
	3.7 Summary	48
4	Lightning protection of structures	49
	4.1 Basics of lightning protection of structures	49
	4.2 Lightning protection levels	51
	4.3 Lightning protection system design approach	51
	4.4 Main components of a lightning protection system	64
	4.5 Materials used in lightning protection systems	70
	4.6 Dependence of protection requirements on type of structure	70
	4.7 Side flash	71

Technology Training that Works

4.8	Alternative hypothesis for protection adequacy	74
4.9	Non-conventional lightning protection systems	77
4.10	Summary	79
5	Lightning protection of electrical lines and substations	81
5.1	Effect of lightning strike on electrical installations	81
5.2	Protection of electrical lines	82
5.3	Protection of electrical substations	84
5.4	Summary	88
6	Principles of grounding and bonding	89
6.1	Objectives of grounding	90
6.2	Electric shock	91
6.3	Objectives of bonding	95
6.4	Equipotential bonding	98
6.5	Routing of grounding conductors	100
6.6	Ground electrodes	103
6.7	Soil resistance	104
6.8	Measurement of soil resistivity	107
6.9	Resistance of a single rod electrode	109
6.10	Current carrying capacity of an electrode	112
6.11	Use of multiple ground rods in parallel	113
6.12	Measurement of ground resistance of an electrode	114
6.13	Concrete encased electrodes	115
6.14	Chemical electrodes	119
6.15	Corrosion problems in electrical grounding systems	122
6.16	Maintenance of grounding system	122
6.17	Summary	123
7	Surge protection of equipment – Part I	125
7.1	Introduction	125
7.2	What is a surge?	126
7.3	Principle of surge protection	129
7.4	Surge protection devices	131
7.5	Graded surge protection	135
7.6	Selection of suitable device for surge protection	140
7.7	Positioning and selection of lightning/surge arrestor	142
7.8	A practical view of surge protection for sensitive equipment	145
7.9	Mitigation of surges	149
7.10	Codes on surge protection	153
7.11	Summary	155
8	Surge protection of equipment – Part II	157
8.1	Introduction	157
8.2	SPD for signal applications	158
8.3	Surge protection of instrumentation systems	159
8.4	General principle of surge protection of transmitters	160

Technology Training that Works

8.5	Surge protection of transmitters at the field end	161
8.6	Comprehensive loop protection	163
8.7	SPDs for other types of sensors	164
8.8	Protection of telemetry systems	166
8.9	Protection of data communication systems	167
8.10	SPD for hazardous applications	168
8.11	Grounding of intrinsically safe circuits	170
8.12	Summary	171
9	Maintenance of lightning protection systems	173
9.1	Introduction	173
9.2	Need for maintenance	173
9.3	Maintenance activities	175
9.4	Summary	176
Appendix-A Risk Assessment approach recommended in AS:1768		177
Appendix-B Lightning protection of wind turbines		187
Appendix-C Lightning protection of marine equipment		209
Appendix-D Electrical noise and mitigation		217
Appendix-E Exercises		257
