

Technology Training that Works

Practical Balancing, Alignment and Condition Monitoring of Rotating Equipment

Contents

1	Introduction	1
	1.1 The mission of maintenance	1
	1.2 Maintenance philosophies	2
	1.3 The role of precision maintenance	4
2	Vibration basics	5
	2.1 What is vibration?	5
	2.2 Vibration waves	7
	2.3 Overall vibration	16
	2.4 Vibration spectrum	19
	2.5 Natural and forcing frequencies	26
3	Vibration measurement	31
	3.1 What is a sensor?	31
	3.2 Displacement transducers	31
	3.3 Which one to choose?	33
	3.4 Methods of signal integration	35
	3.5 Sensor specifications	35
	3.6 Sensor mounting	36
	3.7 Sensor mounting precautions	42
	3.8 Spectrum analyzers	42
	3.9 Averaging	47
	3.10 Display	48
	3.11 Two-channel analyzer	48
	3.12 Other instrumentation	49
4	Balancing	53
	4.1 Why balance?	53
	4.2 Identifying unbalance	54
	4.3 Practical aspects	55
	4.4 Determination of speed at which to balance	56
	4.5 Definitions	57
	4.6 Measures of unbalance	58
	4.7 Trial weights	62
	4.8 Run out	63
	4.9 Eccentricity	64
	4.10 Single-plane balancing	64
	4.11 Procedure	65
	4.12 One-run balancing	68

Technology Training that Works

4.13	Overhung rotor	69
4.14	Balancing standards	71
4.15	Field balancing standards	74
5	Alignment	77
5.1	What is alignment?	77
5.2	Concerns related to alignment	78
5.3	Identifying and diagnosing misalignment	79
5.4	Measuring misalignment	80
5.5	Measuring rotating shafts	82
5.6	Rough methods	84
5.7	Reverse-dial method	86
5.8	Face-rim method	92
5.9	Calculations	94
5.10	Laser alignment	97
5.11	Alignment tolerances	100
5.12	Duration of alignment process	102
5.13	Bearing stiffness and vibration	103
6	Other common machinery faults	105
6.1	Rotating machinery	105
6.2	Piping, bases and supports	115
6.3	Natural frequencies and resonance	117
6.4	Modal and deflection shape analysis	123
6.5	Troubleshooting unwanted vibration	124
7	Related tasks for precision maintenance	129
7.1	Tighten, lubricate, clean	129
7.2	Chemical and particle analysis	132
7.3	Ultrasonic inspection	134
7.4	Temperature monitoring	135
7.5	Performance monitoring	137
7.6	Root cause failure analysis	139
8	Managing your precision maintenance program	143
8.1	Baselines and trending	143
8.2	Criteria for choosing baselines	143
8.3	Trending	146
8.4	Which machines to monitor	147
8.5	Managing data	148
8.6	Software for trending	149
8.7	Scheduling maintenance	151
8.8	Interruptive and non-interruptive	152
8.9	Outsourcing	153
8.10	Selling to management: a new mindset	154
