# Practical Fundamentals of OPC

---

## Contents

---

<b>1</b>	<b>Overview</b>	<b>1</b>
1.1	What is OPC?	
1.2	The Problems addressed by OPC	
1.3	The logical object model	
1.4	OPC specifications	
<b>2</b>	<b>Supporting technologies</b>	<b>13</b>
2.1	Objective oriented Software Technology	
2.2	Active X and Active X control	
2.3	The client/ server paradigm	
2.4	DDE and NetDDE	
2.5	OLE	
2.6	COM/DCOM	
2.7	LANs and WANs	
2.8	Protocols and protocols stacks	
2.9	Ethernet	
2.10	TCP/IP	
<b>3</b>	<b>COM/DCOM</b>	<b>23</b>
3.1	Introduction	
3.2	Interfaces	
3.3	IUnknown	
3.4	Client/server relationships	
3.5	Server object creation and access	
3.6	The COM library	

*Technology Training that Works*

---

<b>4</b>	<b>OPC Overview, Common definitions and interface specifications</b>	<b>35</b>
----------	--	-----------

---

4.1	Background	
4.2	General Structure of OPC specifications	
4.3	OPC overview and  OPC common definitions	
4.4	OPC interface Architecture	
4.5	Other common interface issues	
4.6	Shutdown of servers	
4.7	Interface <i>IOPCCommon</i>	
4.8	Installation and registration requirements	
4.9	OPC server browser	
4.10	OPC server browser not available	

---

<b>5</b>	<b>OPC data access specifications</b>	<b>45</b>
----------	---------------------------------------	-----------

---

5.1	Background	
5.2	OPC DA companion specifications	
5.3	OPC DA overview	
5.4	OPC DA server hierarchy	
5.5	Group attributes	
5.6	Events and event notifications	
5.7	Item properties	
5.8	Exchange of information between server and client	

---

<b>6</b>	<b>OPC alarms and events (AE) specification</b>	<b>67</b>
----------	---	-----------

---

6.1	Background	
6.2	DA vs AE	
6.3	Specification overview	
6.4	Types of server and clients	
6.5	Alarm condition	
6.6	Events and event notifications	
6.7	COM objects defines by OPC AE	
6.8	Condition state synchronization and error handling	

*Technology Training that Works*

<b>7</b>	<b>OPC historical data access specification</b>	<b>81</b>
7.1	Background	
7.2	The difference between HDA and DA	
7.3	Definitions	
7.4	Server implementation	
7.5	Architecture	
7.6	Data exchanges possibilities	
7.7	Aggregation	
<b>8</b>	<b>OPCB specifications</b>	<b>95</b>
8.1	Overview	
8.2	Scope of the specification	
8.3	Relationship with IEC 61512-1	
8.4	Client-server interaction	
8.5	Architecture	
8.6	Data sources and interfaces	
8.7	Interfaces and objects	
8.8	OPCB namespace	
8.9	Browsing the OPCB namespace	
8.10	Properties	
8.11	Parameters, results and their properties	
8.12	Batch List	
<b>9</b>	<b>OPC security</b>	<b>129</b>
9.1	Introduction	
9.2	Levels of security	
9.3	The security reference model	
9.4	DCOM security concepts	
9.5	OPC security specification	
9.6	Time stamp	
9.7	Error handling	
9.8	Security	

*Technology Training that Works*

<b>10</b>	<b>OPC XML-DA</b>	<b>143</b>
10.1	Background	
10.2	XML, SOAP and Web services	
10.3	General features	
10.4	Security	
10.5	Server model	
10.6	DX database structure	
10.7	OPC DX configuration services	
10.8	OPC DX runtime	
<b>11</b>	<b>OPC data eXchange</b>	<b>153</b>
11.1	Background	
11.2	data integration	
11.3	OPC interface architecture	
11.4	control and monitoring by attributes	
11.5	Server model	
11.6	DX database structure	
11.7	OPC DX configuration services	
11.8	OPC DX runtime	
<b>12</b>	<b>Troubleshooting</b>	<b>163</b>
12.1	DCOM network stack	
12.2	Physical and data Link Level problems	
12.3	Network and transport level problems	
12.4	COM/DCOM problems	
12.5	Client/server problems	
12.6	Other issues
