

Technology Training that Works

Practical Process Control

Contents

1	Introduction	1
1.1	Objectives	1
1.2	Introduction	1
1.3	Basic definitions and terms used in process control	2
1.4	Process modeling	2
1.5	Process dynamics and time constants	6
1.6	Types or modes of operation of process control systems	15
1.7	Closed loop controller and process gain calculations	16
1.8	Proportional, integral and derivative control modes	17
1.9	An introduction to cascade control	18
2	Process Management and Transducers	21
2.1	Objectives	21
2.2	The definition of transducers and sensors	21
2.3	Listing of common measured variables	21
2.4	The common characteristics of transducers	22
2.5	Sensor dynamics	24
2.6	Selection of sensing devices	24
2.7	Temperature sensors	25
2.8	Pressure transmitters	31
2.9	Flow meters	39
2.10	Level transmitters	45
2.11	The spectrum of user models in measuring transducers	47
2.12	Instrumentation and transducer considerations	48
2.13	Selection criteria and considerations	50
2.14	Introduction to the smart transmitter	52
3	Basic Principles of Control Valves and Actuators	55
3.1	Objectives	55
3.2	An overview of eight of the most basic types of control valves	55
3.3	Control valve gain, characteristics, distortion and rangeability	70
3.4	Control valve actuators	75
3.5	Control valve positioners	80
3.6	Valve sizing	80

Technology Training that Works

4	Fundamentals of Control Systems	83
4.1	Objectives	83
4.2	ON-OFF control	83
4.3	Modulating control	84
4.4	Open loop control	85
4.5	Closed control loop	86
4.6	Dead time processes	90
4.7	Process responses	91
4.8	Dead zone	92
5	Stability and Control Modes of Closed Loops	93
5.1	Objectives	93
5.2	The industrial process in practice	93
5.3	Dynamic behavior of the feed heater	94
5.4	Major disturbances of the feed heater	95
5.5	Stability	95
5.6	Proportional control	98
5.7	Integral control	101
5.8	Derivative control	104
5.9	Proportional, integral and derivative modes	107
5.10	ISA versus "Allen Bradley"	107
5.11	P I and D relationships and related interactions	107
5.12	Applications of process control modes	108
6	Digital Control Principles	111
6.1	Objectives	111
6.2	Digital vs analog: A revision of their definitions	111
6.3	Action in digital control loops	111
6.4	Identifying functions in the frequency domain	112
6.5	The need for digital control	114
6.6	Scanned calculations	117
6.7	Proportional control	117
6.8	Integral control	117
6.9	Derivative control	118
6.10	Lead function as derivative control	118
6.11	Example of incremental form (Siemens S5 - 100V)	119
7	Real and Ideal PID Controllers	121
7.1	Objectives	121
7.2	Comparative descriptions of real and ideal controllers	121
7.3	Description of the IDEAL or the non-interactive PID controller	121
7.4	Description of the real (interactive) PID controller	122
7.5	Lead function - derivative control with filter	123
7.6	Derivative action and effects of noise	124
7.7	Example of the KENT K90 controllers PID algorithms	125

Technology Training that Works

8	Tuning of PID Controllers in Both Open and Closed Loop Control Systems	127
8.1	Objectives	127
8.2	Objectives of tuning	127
8.3	Reaction curve method (Ziegler Nichols)	129
8.4	Ziegler Nichols open loop tuning method (1)	131
8.5	Ziegler-Nichols open loop method (2) using POI	132
8.6	Loop time constant (LTC) method	134
8.7	Hysteresis problems that may be encountered in open loop tuning	136
8.8	Continuous cycling method (Ziegler Nichols)	136
8.9	Damped cycling tuning method	138
8.10	Tuning for no overshoot on start up (Pessen)	142
8.11	Tuning for some overshoot on start up (Pessen)	143
8.12	Summary of important closed loop tuning algorithms	143
8.13	PID equations: Dependent and independent gains	143
9	Controller Output Modes, Operating Equations and Cascade Control	147
9.1	Objectives	147
9.2	Controller output	147
9.3	Multiple controller output configurations	148
9.4	Saturation and non-saturation of output limits	149
9.5	Cascade control	150
9.6	Initialization of a cascade system	152
9.7	Equations relating to controller configurations	153
9.8	Application notes on the use of equation types	155
9.9	Tuning of a cascade control loop	156
9.10	Cascade control with multiple secondaries	157
10	Concepts and Applications of Feedforward Control	159
10.1	Objectives	159
10.2	Application and definition of feedforward control	159
10.3	Manual feedforward control	160
10.4	Automatic feedforward control	160
10.5	Examples of feedforward controllers	161
10.6	Time matching as feedforward control	161
11	Combined Feedback and Feedforward Control	165
11.1	Objectives	165
11.2	The feedforward concept	165
11.3	The feedback concept	166
11.4	Combining feedback and feedforward control	166
11.5	Feedback - Feedforward summer	166
11.6	Initialization of a combined feedback and feedforward control system	167
11.7	Tuning aspects	167

Technology Training that Works

12	Long Process Dead-time in Closed Loop Control and the Smith Predictor	169
12.1	Objectives	169
12.2	Process deadtime	169
12.3	An example of process deadtime	170
12.4	The Smith Predictor model	171
12.5	The Smith Predictor in theoretical use	172
12.6	The Smith Predictor in reality	173
12.7	An exercise in deadtime compensation	173
13	Basic Principles of Fuzzy Logic and Neural Networks	175
13.1	Objectives	175
13.2	Introduction to fuzzy logic	175
13.3	What is fuzzy logic?	176
13.4	What does fuzzy logic do?	176
13.5	The rules of fuzzy logic	176
13.6	Fuzzy logic example using five rules and patches	178
13.7	The Achilles heel of fuzzy logic	179
13.8	Neural networks	180
13.9	Neural back-propagation networking	181
13.10	Training a neuron network	183
13.11	Conclusions, and then the next step	184
14	Self-Tuning Intelligent Control and Statistical Process Control	185
14.1	Objectives	185
14.2	Self-tuning controllers	185
14.3	Gain scheduling controller	186
14.4	Implementation requirements for self tuning controllers	187
14.5	Statistical process control	187
14.6	Two ways to improve a production process	188
14.7	Obtaining the information required for SPC	189
14.8	Calculating control limits	194
14.9	The logic behind control charts	196
Appendix A	Some Laplace Transform Pairs	199
Appendix B	Block Diagram Transformation Theorems	203
Appendix C	Getting started with PC-ControlLAB	205
Appendix D	Practical exercises	211
Appendix E	Quiz	313
