

Technology Training that Works

Power Electronics and Switch Mode Power Supply

Contents

1	Introduction	1
1.1	Basic principles of PSU circuits	1
1.2	Power supply specifications	8
1.3	SMPS block diagram	11
1.4	Linear and SMPS comparison	15
1.5	Summary	20
2	Topologies	21
2.1	Introduction	21
2.2	Non-isolated topologies	22
2.3	Isolated topologies	36
2.4	Topology comparison	48
2.5	Choosing topologies based on power supply specifications	50
2.6	Summary	51
3	IC PWM Controllers	53
3.1	PWM controller review	53
3.2	UC3825 block diagram	57
3.3	The speed critical path	62
3.4	High speed complementary blocks	63
3.5	Glue or remaining blocks	67
3.6	Summary	71
4	The Input Section	73
4.1	Component selection and design criteria	73
4.2	Input protective devices	92
4.3	Summary	99

Technology Training that Works

5	Power Transistors	101
5.1	Transistor selection	101
5.2	Gate/base drive considerations for safe operating of transistors	104
5.3	Design considerations for safe operating of transistors	109
5.4	Switch protection circuits	116
5.5	The power MOSFET used as a switch	119
5.6	Summary	129
6	High Frequency Transformers	131
6.1	Basic transformer theory	131
6.2	High frequency transformers for SMPS	137
6.3	Core material and geometry selection	138
6.4	Design of a power transformer for a PWM push/pull convertor	140
6.5	Loss and temperature rise	141
6.6	Winding techniques	143
6.7	Summary	149
7	The Output Section	151
7.1	Output rectification and filtering	151
7.2	Power rectifier characteristics	153
7.3	Calculating the rectifier diode peak current capability for the push-pull convertors	158
7.4	Output power inductor design	160
7.5	Output filter capacitor design	161
7.6	Summary	162
8	Stability in SMPS	163
8.1	Transfer functions	163
8.2	Criteria for stability	170
8.3	SMPS control	171
8.4	Design compensation network	174
8.5	Loop stability measurements	177
8.6	Summary	183

Technology Training that Works

9	EMI/RFI Considerations	185
9.1	Noise specifications	185
9.2	EMI/FRI sources in SMPS	186
9.3	Filters for RFI suppression	193
9.4	Summary	195
10	Power Supply Electrical Safety Standards	197
10.1	Construction requirements	198
10.2	Transformer construction	202
10.3	Summary	209
11	Heatsinking	211
11.1	The thermal equation	211
11.2	Selecting a heatsink	216
11.3	Custom heat sinks	221
11.4	Summary	226
Appendix A	Calculations	227
Appendix B	Exercises	233
