

Technology Training that Works

Practical Process Control & Tuning of Industrial Control Loops

Contents

1	Introduction	1
1.1	Introduction	1
1.2	Basic definitions and terms used in process control	2
1.3	Process modeling	3
1.4	Process dynamics and time constants	7
1.5	Types or modes of operation of process control systems	17
1.6	Closed loop controller and process gain calculations	19
1.7	Proportional, integral and derivative control modes	20
1.8	An introduction to cascade control	21
<hr/>		
2	Process measurement and transducers	23
2.1	Listing of common measured variables	23
2.2	Effect of material characteristics on belt conveyor	24
2.3	The common characteristics of transducers	24
2.4	Sensor dynamics	26
2.5	Selection of sensing devices	27
2.6	Temperature sensors	27
2.7	Pressure transmitters	34
2.8	Flow meters	44
2.9	Level transmitters	51
2.10	The spectrum of user models in measuring transducers	53
2.11	Instrumentation and transducer considerations	54
2.12	Selection criteria and considerations	57
2.13	Introduction to the smart transmitter	59

Technology Training that Works

3	Basic principles of control valves and actuators	61
3.1	An overview of eight of the most basic types of control valves	61
3.2	Control valve gain, characteristics, distortion and rangeability	78
3.3	Control valve actuators	84
3.4	Control valve positioners	89
3.5	Valve sizing	90
4	Fundamentals of control systems	91
4.1	Introduction	91
4.2	The terminology in control	92
4.3	Basic concepts of control	93
4.4	Classification control	96
4.5	Modes of feedback control	105
4.6	Reverse or direct acting controllers	125
4.7	Stability of feedback control	128
4.8	Open loop characterization of the process	131
4.9	Dead zone	136
4.10	The industrial process in practice	137
5	Fundamentals of tuning PID controllers	139
5.1	Introduction	139
5.2	Default and typical settings	141
5.3	Quick and easy open loop control tuning methods	141
5.4	The general purpose closed looped tuning methods	150
5.5	Fine tuning different processes	158
5.6	PID equations: dependent and independent gains	160

Technology Training that Works

6	Different tuning rules available	161
6.1	Introduction	161
6.2	Different tuning rules compared	162
6.3	Controllability of processes	171
6.4	Flow loops	171
6.5	A few general suggestions on when to use them/when not to use them	174
6.6	28 Rules of thumb in tuning	175
6.7	Auto tuning methods	177
7	Cascade control	187
7.1	Definitions of cascade control	187
7.2	Advantages of using cascade control	188
7.3	Selecting controller modes	190
7.4	The concept of process variable or PV-tracking	191
7.5	Initialization of a cascade system	191
7.6	Equations relating to controller configurations	192
7.7	Application notes on the use of equation types	195
7.8	Tuning of a cascade control system	196
7.9	Cascade control with multiple secondaries	199
7.10	Multiple output calculations	199
8	Feedforward and ratio control	201
8.1	Introduction to feedforward and ratio control	201
8.2	Designing linear feedforward controllers	210
8.3	Tuning linear feedforward controllers	212
8.4	Non-linear feedforward compensation	221
8.5	Chapter summary	225

Technology Training that Works

9	Long process deadtime in closed loop control and the Smith predictor	227
9.1	Process deadtime	227
9.2	An example of process deadtime	227
9.3	The Smith predictor model	230
9.4	The Smith predictor in theoretical use	231
9.5	The Smith predictor in reality	231
9.6	An exercise in deadtime compensation	231

10	Adaptive and self tuning controllers	233
10.1	The need for adaptive control	233
10.2	Process nonlinear ties	233
10.3	Adaptive control using preset compensation	234
10.4	Self tuning controllers	237
10.5	Adaptive control using pattern recognition	238
10.6	Implementation requirements for self tuning controllers	240
10.7	Adaptive control using discrete parameter estimation	241
10.8	The adapter tuning formulas	243
10.9	Self tuning versus adaptive control	244

11	Good practices and troubleshooting in tuning	245
11.1	The control objective	245
11.2	Flow control	246
11.3	Pressure and level control	246
11.4	Temperature control	248
11.5	Composition control	248
11.6	Cascade control tuning	248
11.7	Troubleshooting and diagnostics in controller tuning	249
11.8	The practical limitations in the tuning of a control loop	251
