# Practical Power System Protection for Engineers and Technicians

---

## Contents

Preface	ix
<hr/>	
Chapter 1— Need for protection	1
1.1 Need for protective apparatus	1
1.2 Basic requirements of protection	2
1.3 Basic components of protection	2
1.4 Summary	3
<hr/>	
Chapter 2 — Faults, types and effects	5
2.1 The development of simple distribution systems	5
2.2 Faults-types and their effects	7
<hr/>	
Chapter 3 — Simple calculation of short circuit currents	13
3.1 Introduction	13
3.2 Revision of basic formulae	13
3.3 Calculation of short circuit MVA	18
3.4 Useful formulae	21
3.5 Cable information	26
<hr/>	
Chapter 4 — System Grounding	29
4.1 Introduction	29
4.2 Grounding devices	30
4.3 Evaluation of grounding methods	33
4.4 Effect of electric shock on human beings	35
<hr/>	
Chapter 5 — Fuses	39
5.1 Historical	39
5.2 Re-wireable type	39

*Technology Training that Works*

5.3	Cartridge type	40
5.4	Operating characteristics	40
5.5	British standard 88:1952	41
5.6	Energy 'let through'	42
5.7	Application of selection of fuses	43
5.8	General 'rules of thumb'	44
5.9	Special types	44
5.10	General	45
5.11	I <sub>S</sub> -limiter	46
<hr/> <b>Chapter 6 — Instrument transformers</b>		<b>51</b>
6.1	Purpose	51
6.2	Basic theory of operation	51
6.3	Voltage transformers	52
6.4	Current transformers	62
6.5	Application of current transformers	76
6.6	Introducing relays	77
6.7	Inverse definite minimum time lag (IDMTL) relay	79
<hr/> <b>Chapter 7 — Circuit breakers</b>		<b>83</b>
7.1	Introduction	83
7.2	Protective relay—circuit breaker combination	83
7.3	Purpose of circuit breakers (switchgear)	85
7.4	Behavior under fault conditions	86
7.5	Arc	87
7.6	Types of circuit breakers	88
7.7	Comparison of breaker types	97
<hr/> <b>Chapter 8 — Tripping batteries</b>		<b>109</b>
8.1	Tripping batteries	109
8.2	Construction of battery chargers	115
8.3	Maintenance guide	116
8.4	Trip circuit supervision	120
8.5	Reasons why breakers and contactors fail to trip	121
8.6	Capacity storage trip units	122

*Technology Training that Works*

<b>Chapter 9 — Relays</b>	<b>125</b>
9.1 Introduction	125
9.2 Principle of the construction and operation of the IDMTL relay	126
9.3 Factors influencing choice of plug setting	138
9.4 The new era in protection – microprocessor vs electronic vs traditional	139
9.5 Universal microprocessor overcurrent relay	147
9.6 Technical features of a modern microprocessor relay	148
9.7 Type testing of static relays	158
9.8 The future of protection for distribution systems	159
9.9 The era of the IED	161
9.10 Substation automation	164
9.11 Communication capability	167
<b>Chapter 10 — Co-ordination by time grading</b>	<b>179</b>
10.1 Introduction	180
10.2 What is coordination?	180
10.3 Over-current coordination	181
10.4 Protection design parameters on medium and low voltage networks	186
10.5 Sensitive ground fault protection	205
<b>Chapter 11 — Low voltage network</b>	<b>207</b>
11.1 Introduction	207
11.2 Air circuit breakers	207
11.3 Moulded case circuit breakers	209
11.4 Application and selective co-ordination	218
11.5 Ground leakage protection	223
<b>Chapter 12 — Mine underground distribution protection</b>	<b>229</b>
12.1 General	229
12.2 Ground leakage protection	230
12.3 Pilot wire monitor	233
12.4 Ground fault lockout	235
12.5 Neutral grounding resistor monitor (NERM)	235

*Technology Training that Works*

<b>Chapter 13 — Principles of unit protection</b>	<b>247</b>
13.1 Protective relay systems	247
13.2 Main or unit protection	247
13.3 Back-up protection	248
13.4 Methods of obtaining selectivity	248
13.5 Differential protection	248
13.6 Transformer differential protection	251
13.7 Switchgear differential protection	252
13.8 Feeder pilot-wire protection	252
13.9 Time taken to clear faults	252
13.10 Recommended unit protection systems	253
13.11 Advantages of unit protection	253
<b>Chapter 14 — Feeder protection cable feeders and overhead lines</b>	<b>255</b>
14.1 Introduction	255
14.2 Translay	255
14.3 Solkor protection	256
14.4 Distance protection	260
<b>Chapter 15 — Transformer protection</b>	<b>289</b>
15.1 Winding polarity	289
15.2 Transformer connections	290
15.3 Transformer magnetizing characteristics	291
15.4 In-rush current	292
15.5 Neutral grounding	294
15.6 On-load tap changers	295
15.7 Mismatch of current transformers	296
15.8 Types of faults	296
15.9 Differential protection	299
15.10 Restricted ground fault	303
15.11 HV overcurrent	308
15.12 Protection by gas sensing and pressure detection	310
15.13 Overloading	312
<b>Chapter 16 — Switchgear (busbar) protection</b>	<b>319</b>
16.1 Importance of busbars	319
16.2 Busbar protection	320
16.3 The requirements for good protection	320
16.4 Busbar protection types	321

*Technology Training that Works*

---

<b>Chapter 17 — Motor protection relays</b>	<b>333</b>
17.1 Introduction	333
17.2 Stalling of motors	343
17.3 Overcurrent/overload	346
17.4 Undervoltage/overvoltage	347
17.5 Underfrequency	348
17.6 Pole slip/out of step	348
17.7 Loss of excitation	349
17.8 Inadvertant energization	349
17.9 Overfluxing	349
17.10 Stall protection/acceleration time	350
17.11 Negative sequence events	352
17.12 Derating factors	354
17.13 Earth faults – core balance, residual stabilizing factors	355
17.14 Calculation of protective relay settings	356
17.15 Example	361

---

<b>Chapter 18 — Generator protection</b>	<b>363</b>
18.1 Introduction	363
18.2 Stator grounding and ground faults	364
18.3 Overload protection	366
18.4 Overcurrent protection	366
18.5 Overvoltage protection	367
18.6 Unbalanced loading	367
18.7 Rotor faults	367
18.8 Reverse power	370
18.9 Loss of excitation	370
18.10 Loss of synchronization	370
18.11 Field suppression	370
18.12 Industrial generator protection	370
18.13 Numerical relays	371
18.14 Parallel operation with grid	375

---

<b>Chapter 19 — Cables and protection</b>	<b>377</b>
19.1 Introduction	377
19.2 Advantages of cables over overhead transmission lines	379
19.3 Disadvantages of cables in power transmission	380
19.4 Types of cables	380

*Technology Training that Works*

19.5 Cable jointing (splicing) accessories	381
19.6 Need for termination kits	382
19.7 Types of failures	383
19.8 Reasons for failure	384
19.9 Short circuit protection of underground cables	391
19.10 Cable protection applications	395
19.11 Fault location	399
19.12 Electrical tests for detection of cable faults	401
19.13 Analysis of failures	404
19.14 Documentation	408
<hr/>	
Chapter 20 — Management of Protection	415
20.1 Management of protection	415
20.2 Schedule A	415
20.3 Schedule B	416
20.4 Test sheets	417
<hr/>	
Appendix A — The Protection of Railway Traction Circuits	423
<hr/>	
Appendix B — Typical Cable Data Sheets	433
<hr/>	
Appendix C — Practical exercises on relay coordination	437
<hr/>	
Appendix D — SIPROTEC4 7SA6 Distance Protection relay	443
<hr/>	
Appendix E — SIPROTEC4 7SJ64 Feeder Management Relay	453
<hr/>	
Appendix F — SIPROTEC4 7SD61 Line Differential Relay	463

*Technology Training that Works*

Appendix G — SIPROTEC4 7SS60 Feeder Management Relay	473
Appendix H — SIPROTEC4 7UT6 Transformer Differential Relay	479
Appendix I — Arc Sensors	487
Appendix J — Integral Digital Protection Devices	495
