

Technology Training that Works

Electrical Maintenance for Engineers and Technicians

Contents

1	Electrical Preventive Maintenance	3
1.1	Introduction	3
1.2	Planning an EPM	6
1.3	Production economics	9
1.4	Energy conservation	9
1.5	Record keeping	10
2	Planning	13
2.1	Introduction	13
2.2	Survey of electrical installations	15
2.3	Installation modifications	17
2.4	Forms and records	18
2.5	Emergency procedures	18
2.6	Identification of critical equipment	19
2.7	Frequency of maintenance	20
2.8	Frequency of inspection	21
2.9	Test and maintenance requirements	22
2.10	Establishment of a systematic program	24
3	Electrical Drawings and Schematics	29
3.1	Electrical diagrams	29
3.2	Single line diagram	30
3.3	Three line diagrams	33
3.4	Common terms	33
3.5	Protective relays	35
3.6	Abbreviations	36
3.7	Schematic diagrams	37
3.8	Logic diagrams	47
3.9	Ladder diagrams	48
3.10	Plant cabling system drawings	49

Technology Training that Works

3.11	Control cable interconnection diagrams	54
3.12	Panel internal wiring diagrams	55
3.13	Terminal diagrams	55
3.14	Summary	55
4	Principles of Safety Rules and Hazards	59
4.1	Overview	59
4.2	Industrial hazards	60
4.3	Electrical hazards	63
4.4	Protective Earthing	64
4.5	Dangers of static electricity	67
4.6	Electric arcing	69
4.7	Preventive maintenance	72
4.8	Reducing fault level	73
4.9	Reducing arcing time	76
4.10	Arc flash protection program	81
4.11	Electrical equipment in explosive atmosphere	82
4.12	Hazards due to high temperature	84
4.13	Electrical accidents and safety measures	88
4.14	Summary	89
5	Inspection of Electrical Systems for Safety	91
5.1	Objectives of inspection	91
5.2	IEE wiring regulations	92
5.3	Initial verification	93
5.4	Testing	94
5.5	Alterations and additions	95
5.6	Periodic inspection and testing	95
5.7	Follow up measures	95
5.8	Summary	96
6	Substation components, Maintenance and Asset Management of Switchgear	99
6.1	Voltage classification	99
6.2	Switchgear rating and specification	100
6.3	Substation types	102
6.4	Substation components	102
6.5	Overview of maintenance of power distribution systems	104
6.6	Maintenance of electrical switchgear	104

Technology Training that Works

6.7	Insulation deterioration	110
6.8	Switchgear diagnostic techniques	112
6.9	Substation battery condition and monitoring	120
6.10	Circuit breaker measurements	122
6.11	Switchgear maintenance procedures	129
6.12	Problems that may be found during switchgear maintenance	133
6.13	Defect management	134
6.14	Case studies of switchgear defects	136
<hr/>		
7	Testing - Introduction	141
7.1	Need for testing	141
7.2	Purpose of testing	142
7.3	Categories of tests	142
7.4	Variations to test voltages and results	143
<hr/>		
8	Insulation Testing	145
8.1	Principles of insulation testing	145
8.2	Purpose of insulation testing	148
8.3	Testing the insulation of equipment	149
8.4	Insulation resistance test voltages	150
8.5	Types of testers	150
8.6	Construction of a tester	151
8.7	Connecting a tester	151
8.8	Test procedure	153
8.9	Precautions to be taken when measuring insulation	156
8.10	Polarization index	157
8.11	Step voltage test	158
8.12	Readings and interpretation	159
8.13	Dryness of insulation using absorption ratio	160
8.14	Burn test	161
<hr/>		
9	High Potential Tests	163
9.1	Purpose of hi-pot testing	163
9.2	AC and DC hi-pot tests	164
9.3	Test equipment construction and connections	166
9.4	Safety precautions to be taken	166
9.5	Test voltages as per applicable standards	167
9.6	VLF high pot test	167

Technology Training that Works

10	Ducter Testing	169
10.1	Need for the instrument	169
10.2	Description of instrument	169
10.3	Working principle	170
10.4	Milli-ohmmeter Vs micro-ohmmeter	173
10.5	Breaker contact resistance measurement	174
10.6	Transformer resistance measurement	175
10.7	Precautions during measurements	175
11	Tests on Other Major Equipment	177
11.1	Other major equipment	177
11.2	HV/MV switchgear and breakers	177
11.3	MV motors	183
11.4	MV capacitors	183
11.5	Disconnectors	185
12	Field Tests	187
12.1	Need for field tests	187
12.2	General safety procedures	188
12.3	Transformers	190
12.4	Switchgear	193
12.5	High voltage disconnectors	193
12.6	MV cables	194
12.7	MV bus ducts	194
12.8	Instrument transformers	195
12.9	Rotating machinery	195
12.10	Surge arresters	196
12.11	Outdoor bus structures	196
12.12	Engine generators	196
13	Testing of Transformers	201
13.1	General	201
13.2	Routine tests	202
13.3	Guarantees and tolerances	203
13.4	Visual inspection	203
13.5	Winding resistance measurements	203
13.6	Turns ratio measurement	204
13.7	Polarity and vector group check	204
13.8	Impedance voltage and load losses	206

Technology Training that Works

13.9	No load losses and current measurement	206
13.10	Insulation resistance tests	207
13.11	Dielectric tests	207
13.12	RIV corona measurements	208
13.13	Partial discharge measurements	209
13.14	Impulse tests	209
13.15	Tests on OLTC	210
13.16	Type tests	210
13.17	Special tests	210
13.18	Tests on bushings	211
14	Transformers	215
14.1	Installation of transformers	217
14.2	Special aspects of installation of large power transformers	222
14.3	Fire protection measures for large transformer installations	228
14.4	Transformer troubleshooting	229
14.5	Liquid level indicator, pressure and temperature gauges	231
14.6	Transformer inspections	234
15	CT Testing	235
15.1	Major tests on a CT	235
15.2	Test procedures	236
15.3	Safety precautions	243
16	VT Testing	245
16.1	Tests on voltage transformers	245
16.2	Test procedures	246
17	Oil Testing	253
17.1	Transformer oil – dielectric properties and uses	253
17.2	The need for testing transformer oil	254
17.3	Dielectric test	255
17.4	Improvement of oil by filtration	256
17.5	Oil filtration units	258
17.6	Test of acidity	260
17.7	Other tests	261
17.8	Dissolved gas analysis	263
17.9	Precautions to be taken when sampling oil	277

Technology Training that Works

18	Protection of Motors	281
18.1	Introduction	281
18.2	Stalling of motors	286
18.3	Over current / overload	290
18.4	Under-voltage / over-voltage	291
18.5	Under-frequency	291
18.6	Pole slip / out of step	292
18.7	Loss of excitation	292
18.8	Inadvertent energization	292
18.9	Over fluxing	293
18.10	Stall protection / acceleration time	293
18.11	Negative sequence currents	295
18.12	Derating factors	296
18.13	Earth faults – core balance, residual stabilising resistors	297
18.14	Calculation of protective relay settings	299
19	Installation and Fault Finding	305
19.1	General installation and environmental requirements	305
19.2	General safety recommendations	305
19.3	Power supply connections and earthing	307
19.4	Installing contactors in power circuit	310
19.5	Installation of AC converters into metal enclosures	311
20	Motor Failure Analysis	317
20.1	Types of motor failure	317
20.2	Common causes of motor failure	318
20.3	Modern developments	326
21	Testing	329
21.1	Insulation life and resistance	329
21.2	Polarization index	332
21.3	DC hipot	334
21.4	DC ramp test	334
21.5	AC hipot	335
21.6	Capacitance test	335
21.7	Dissipation factor	337
21.8	Partial discharge	339
21.9	Surge test	340
21.10	Mechanical testing	345
21.11	Online testing	346

Technology Training that Works

22	Maintenance and Cleaning	349
22.1	Introduction	349
22.2	Factors effecting motor performance	349
22.3	Motor cleaning methods	356
23	Cables - Failure Modes and Fault Detection	361
23.1	Introduction	361
23.2	Various types of cables	362
23.3	Cable joints	362
23.4	Installation	363
23.5	Special locations	368
23.6	Fire prevention and fire protection for cable installations	369
23.7	Types of failures	373
23.8	Reasons for failures	374
23.9	Fault location	379
23.10	Cable testing	381
23.11	Electrical tests for detection of cable faults	385
23.12	Safety issues in fault location	387
23.13	Analysis of failures	389
23.14	Documentation of work	393
23.15	Documentation of failures	394
23.16	Summary	395
24	Introduction to Power Quality	398
24.1	Introduction	399
24.2	Sags and swells	400
24.3	Surges and transients	402
24.4	Harmonics and distortions	404
24.5	Interruptions	405
24.6	Noise disturbance	406
24.7	Notching	407
24.8	Noise definitions	409
24.9	Earthing conductor	410
24.10	Isolated/insulated connections	411
24.11	Ground/earth loops	411
24.12	Site examination	412

Technology Training that Works

25	Installation Guidelines	415
25.1	Checklist of considerations for power quality	415
25.2	Equipment selection specifications	428
25.3	Building maintenance analysis	430
25.4	Power quality versus reliability	432
25.5	Typical project approach	433
26	Testing & Periodic Inspection and Maintenance of UPS Batteries	437
26.1	Introduction	437
26.2	UPS systems	439
26.3	Periodic inspection and maintenance of ups batteries	455
27	Protective Relays	459
27.1	Introduction	459
27.2	Classification of protective relays	460
27.3	Attracted armature relay	460
27.4	Electromagnetic induction relays	461
27.5	Overcurrent relays	461
27.6	Distance relays	461
27.7	Differential relays	461
27.8	Static relays	462
27.9	Comparators	462
27.10	Microprocessor based relays	463
27.11	Relay maintenance	464
27.12	Automated testing	466
27.13	Safety precautions	466
27.14	Basics on relay handling	467
28	Testing and Maintenance	471
28.1	Faults - types and their effects	471
28.2	Causes of inadequate grounding	473
28.3	Mitigation by multiple ground connection	474
28.4	Grounding system inspection	476
28.5	Testing and monitoring	476
28.6	Requirement for testing	484
28.7	Maintenance of grounding system	488
28.8	Grounding for safety during maintenance	490

Technology Training that Works

29	Supervisory Control and Data Acquisition (SCADA)	493
29.1	Introduction	493
29.2	SCADA components	495
29.3	Maintenance and troubleshooting	499
29.4	The maintenance unit system – A case study	506
30	Safe Operation and Maintenance of Electrical Equipment	511
30.1	Introduction	511
30.2	Key safety factors in operation and maintenance of electrical installations	512
30.3	Isolation during maintenance of electrical installations	515
30.4	Visual checks for safety	517
30.5	Monitoring hot spots to improve safety	517
30.6	Earthing for Safety During Maintenance	522
30.7	Need for periodic inspection and maintenance	523
30.8	Emergency and first-aid training	524
31	Portable Electric Tools and Equipment	527
31.1	Introduction	527
31.2	Portable hand and power tools	528
31.3	Portable electric tools	529
31.4	Ground-type plugs and receptacles	530
31.5	Double insulated portable electric tools	532
31.6	Electrical cords	533
31.7	Safety precautions	536
31.8	Employee training	537
32	Maintenance Reports	543
32.1	Transformer test report	543
32.2	UPS inspection checklist	545
32.3	Batteries inspection checklist	546
32.4	Circuit breaker (oil) test report	547
32.5	Overcurrent relay test report	548
Appendix – Practical Exercises		549
