

Technology Training that Works

Wind & Solar Power - Renewable Energy Technologies

Contents

1	Introduction to Renewable Energy	1
1.1	Overview	1
1.2	Sources of energy	2
1.3	Laws of thermodynamics	3
1.4	Renewable and non-renewable energy	4
1.5	Economics of renewable energy	6
1.6	Forces driving the technologies today	9
2	Fundamentals of Photovoltaic Technology	11
2.1	Fundamentals of photovoltaic technology	11
3	System Electrical Design and Sizing	45
3.1	Electrical design	45
3.2	System output	55
3.3	Factors affecting the output	56
4	Mechanical Design of the System	59
4.1	Design requirements for PV array mounting	59
4.2	PV array mounting	60
4.3	Factors affecting the selection of mounting method	67
4.4	Materials used for the array mounting frames	68
4.5	Advances in solar cell manufacturing technology	68

Technology Training that Works

5	System Installation and Commissioning	71
5.1	Introduction	71
5.2	Basic principles for PV components installation	71
5.3	General mounting requirements	72
5.4	PV module mounting details	73
5.5	Battery installation	73
5.6	Genset installation	74
5.7	Electronic equipment installation	74
5.8	Installation checklist	74
5.9	Installation requirements	74
5.10	Commissioning	75
5.11	System monitoring	76
5.12	System maintenance	76
6	Fundamentals of Wind Energy	77
6.1	Introduction	77
6.2	The wind resource	77
6.3	Mechanics of wind	82
6.4	Local effects on wind flow	91
6.5	Wind assessment at potential site	94
6.6	Estimation of the total amount of electricity that can be produced	96
6.7	On-site assessment	96
6.8	Characteristics of a good wind power site	97
6.9	Conclusion	97
7	Development	99
7.1	Introduction	99
7.2	Selecting the right location	99
7.3	Wind data analysis for the evaluation of the power output	100
7.4	Selection of the wind turbine and other equipment	101
7.5	Intermediate economic analysis	101
7.6	Formulation of the bid specifications	102

Technology Training that Works

7.7	Selection of the contractor	103
7.8	Approvals	103
7.9	Financial assistance and incentives	103
8	Turbine Technology	105
8.1	Classification of wind energy systems	106
8.2	Aerodynamics	115
8.3	Output from wind energy systems	119
8.4	Components of wind turbines	120
8.5	Energy storage	132
8.6	Integration with the electrical grid	133
9	Installation and Maintenance	135
9.1	Introduction	135
9.2	Pre-installation	135
9.3	Installation	136
9.4	Warranty, maintenance contracts and insurance	143
9.5	Maintenance	143
10	Overview of Miscellaneous Systems	147
10.1	Solar heating	147
10.2	Types of solar water heating	148
10.3	Batch heaters	149
10.4	Thermosiphon systems	149
10.5	System sizes	149
10.6	Energy efficient building design	150
10.7	Hybrid energy systems	150
10.8	Hybrid electric power systems	151
10.9	Energy sources	151
10.10	System design	152
10.11	Life cycle cost analysis	155

Technology Training that Works

11	Hydro Power	157
11.1	Introduction	157
11.2	Benefits and drawbacks of hydroelectricity	157
11.3	Classification of hydropower plants	158
11.4	Calculation of power output with respect to head and flow	159
11.5	Measurement of head and flow	160
11.6	Types of turbines and their applications	161
11.7	Types of drive systems	170
11.8	Civil works components	171
11.9	Generators for electrical power generation	176
11.10	Other components of a hydropower system	177
11.11	Operation and maintenance of hydro power systems	178
11.12	Economics of hydro power generation	178
11.13	Conclusion	180
<hr/> Multiple Choice and Short Answer Questions		181
<hr/> Practical Exercises		187
