Preface

*iv*

<b>1</b>	<b>Structural engineering – an introduction</b>	<b>1</b>
1.1	Introduction	1
1.2	Structural design – the process	3
1.3	Elements of structural design	4
1.4	Course objectives	5
1.5	Course outcomes	5
<b>2</b>	<b>Structural systems &amp; analysis of statically determinate structures</b>	<b>7</b>
2.1	Classification of structures	8
2.2	Types of loads	11
2.3	Types of stress in structural members	15
2.4	Types of supports in structures	16
2.5	Equilibrium of bodies	17
2.6	Deformation of structures under loading	21
2.7	Structural classification based on degree of indeterminacy	23
2.8	Bending moment and shear force	27
2.9	Effect of moving loads	36
2.10	Analysis of pin-jointed frames	38
2.11	Influence lines	43
2.12	Conclusion	48
<b>3</b>	<b>Principles of the Strength of Materials</b>	<b>49</b>
3.1	Mechanical properties of the materials	49
3.2	Elasticity of the materials	49
3.3	Development of internal stresses	54
3.4	Flexural stresses in beams	56
3.5	Shear force and bending moment – the relationship	66
3.6	Bending shear stress	68
3.7	Horizontal and vertical shear – relationship	69
3.8	Bending shear stress – determination	70
3.9	Deformation of beams	75
3.10	The case of combined stresses	90
3.11	Analysis of columns	94
3.12	Conclusion	100

<b>4</b>	<b>Analysis of Statically Indeterminate Structures</b>	<b>101</b>
4.1	Structural classification based on the degree of indeterminacy	101
4.2	Principle of superposition	106
4.3	Analysis of statically indeterminate beams	107
4.4	Multi span or continuous beams	114
4.5	Slope deflection method	123
4.6	Moment distribution method	140
4.7	Influence line diagram for statically indeterminate structures	156
4.8	Conclusion	161
<b>5</b>	<b>Design Theories</b>	<b>163</b>
5.1	Stress-strain relationship for different materials	163
5.2	Design philosophies	166
5.3	Combination of loads	171
5.4	Theories of failure	172
5.5	Conclusion	172
<b>6</b>	<b>Design of Steel Structures</b>	<b>173</b>
6.1	Design of structures	173
6.2	Use of steel for structures	174
6.3	Properties of structural steel	176
6.4	Steel structural sections	177
6.5	Design of steel structures	178
6.6	Design of joints and fasteners for steel structures	179
6.7	Design of tension members	201
6.8	Design of compression members	207
6.9	Design of beams	219
6.10	Design of truss and allied structures	230
6.11	Conclusion	231
<b>7</b>	<b>Design of Reinforced Cement Concrete Structures</b>	<b>233</b>
7.1	Concrete – the material	233
7.2	Principle of reinforced concrete design	245
7.3	Design norms for reinforced concrete beams	258
7.4	Design of reinforced concrete slab	263
7.5	Design of reinforced concrete foundations	271
7.6	Design of axially loaded columns	279
7.7	Pre-stressed concrete – an introduction	285
7.8	Multistoried structures	290
7.9	Conclusion	292
<b>8</b>	<b>Limit State &amp; Plastic Design</b>	<b>293</b>
8.1	Limit state theory	293
8.2	Design philosophy	294
8.3	RCC design by limit state	295
8.4	Steel structural design – plastic theory	304
8.5	Conclusion	314

---

9	Design and Construction of Masonry and Timber Structures	315
9.1	Masonry structures	315
9.2	Design of masonry structures	319
9.3	Timber construction	322
9.4	Strength of timber	326
9.5	Design of timber structures	327
9.6	Conclusion	330
<hr/>		
10	Exercises	331

---
