

Technology Training that Works

Practical TCP/IP and Ethernet Networking for Industry

Contents

Preface

vi

1	Introduction to Communications	1
1.1	Data communications	1
1.2	Transmitters, receivers and communication channels	2
1.3	Types of communication channels	4
1.4	Communications channel properties	5
1.5	Data transmission modes	8
1.6	Encoding methods	12
1.7	Error detection	14
2	Networking Fundamentals	17
2.1	Overview	17
2.2	Network communication	18
2.3	Types of networks	20
2.4	The OSI model	23
2.5	Interoperability and internetworking	31
2.6	Protocols and protocol standards	32
2.7	IEEE/ISO standards	33
2.8	Network topologies	35
2.9	Media access control methods	42
3	10 Mbps Half-duplex (CSMA/CD) Ethernet	45
3.1	The origins of Ethernet	45
3.2	Physical layer implementations	46
3.3	Signaling methods	50
3.4	Medium access control	51
3.5	Frame transmission	51
3.6	Frame reception	51
3.7	Collisions	52

Technology Training that Works

3.8	Frame format	53
3.9	Reducing collisions	55
3.10	Half-duplex Ethernet design rules	56
4	Fast and Gigabit Ethernet systems	59
4.1	Achieving higher speed	59
4.2	100Base-T	60
4.3	Fast Ethernet design considerations	63
4.4	Gigabit Ethernet	65
4.5	Gigabit Ethernet design considerations	71
5	Introduction to TCP/IP	73
5.1	The origins of TCP/IP	73
5.2	The ARPA model vs the OSI model	74
5.3	The TCP/IP protocol suite vs the ARPA model	74
6	Internet Layer Protocols	79
6.1	Overview	79
6.2	IPv4	80
6.3	IPv6/IPng	96
6.4	ARP	105
6.5	RARP	109
6.6	ICMP	110
6.7	Routing protocols	116
6.8	IGPs	120
6.9	EGPs	123
7	Host- to-host (transport) Layer Protocols	125
7.1	TCP	126
7.2	UDP	134
8	Application Layer Protocols	137
8.1	Introduction	137
8.2	FTP	138
8.3	TFTP	141
8.4	TELNET	145
8.5	DNS	148
8.6	WINS	153
8.7	SNMP	155

Technology Training that Works

8.8	SMTP	158
8.9	POP	159
8.10	BOOTP	160
8.11	DHCP	162

9	TCP/IP Utilities	167
----------	-------------------------	------------

9.1	Introduction	167
9.2	PING	167
9.3	ARP	171
9.4	NETSTAT	172
9.5	NBTSTAT	173
9.6	IPCONFIG	174
9.7	WINIPCFG/ WNITPCFG	175
9.8	TRACE RouTe	176
9.9	ROUTE	179
9.10	The HOSTS file	181

10	LAN System Components	183
-----------	------------------------------	------------

10.1	Introduction	183
10.2	Repeaters	184
10.3	Media converters	185
10.4	Bridges	186
10.5	Hubs	188
10.6	Switches	191
10.7	Routers	196
10.8	Gateways	198
10.9	Print servers	198
10.10	Terminal servers	199
10.11	Thin servers	199
10.12	Remote access servers	200
10.13	Network time servers	200

11	Virtual LANs (VLANs)	201
-----------	-----------------------------	------------

11.1	The need for VLAN technology	201
11.2	Benefits of VLAN	204
11.3	VLAN restrictions	205
11.4	Basic operation of a VLAN	205
11.5	VLAN implementation	206
11.6	Interconnection methods	210
11.7	Filtering table	212
11.8	Tagging	212

Technology Training that Works

12	Virtual Private Networks (VPNs)	215
12.1	Introduction	215
12.2	What is a VPN?	217
12.3	Types of VPN	217
12.4	Requirements for designing a VPN	218
12.5	Defining policies	219
12.6	Functional requirements	219
12.7	Security	226
13	The Internet for Communication	237
13.1	Introduction	237
13.2	Protocols	238
13.3	Hardware	247
13.4	Implementation considerations: QoS	256
14	Security Considerations	259
14.1	The security problem	259
14.2	Authentication	261
14.3	Routers	262
14.4	Firewalls	263
14.5	Intrusion Detection Systems (IDSs)	269
14.6	Security management	270
14.7	The Public Key Infrastructure (PKI)	272
15	Process Automation	279
15.1	Background	279
15.2	Legacy automation architectures	280
15.3	The 'factory of the future'	282
15.4	Modbus/ TCP	289
15.5	Ethernet/IP (Ethernet/ Industrial Protocol)	292
16	Troubleshooting Ethernet	297
16.1	Introduction	297
16.2	Common problems and faults	297
16.3	Tools of the trade	297
16.4	Problems and solutions	299
16.5	Troubleshooting switched networks	310
16.6	Troubleshooting fast Ethernet	311
16.7	Troubleshooting Gigabit Ethernet	311

Technology Training that Works

17	TCP/IP Troubleshooting	313
17.1	Introduction	313
17.2	Tools of the trade	313
17.3	Typical network layer problems	313
17.4	Transport layer problems	316

18	Satellites and TCP/ IP	317
18.1	Introduction	317
18.2	Overview of satellite communications	317
18.3	Advantages of satellite networks	320
18.4	Applications of satellite systems	321
18.5	Weaknesses of TCP/IP in satellite usage	322
18.6	Methods of optimizing TCP/IP over satellite channels	323

	Appendices	327
	Appendix A -Glossary	327
	Appendix B - Port number allocation	347
	Appendix C - Practical Exercises	349
	Appendix D - Practical Exercises - Solutions	373
