

Technology Training that Works

Understanding Electrical Engineering and Safety for Non-Electricians

Contents

1	Electricity	1
1.1	Basic facts about electricity	1
1.2	Static electricity	2
1.3	Electric cells and DC (Dry cell)	7
1.4	A Simple circuit using DC source	9
1.5	Electricity as a form of energy	10
1.6	Voltage and current relationship - Ohm's law	10
1.7	Power and energy relationship	11
1.8	Electromagnetic generators	13
1.9	Direct current and alternating current	17
1.10	Single phase and three phase AC systems	19
1.11	Phase sequence	21
1.12	Summary	22
2	How is Electricity Distributed?	23
2.1	Energy and energy conversion	23
2.2	Turbines and generators	24
2.3	Modern electrical power systems	27
2.4	Renewable energy power plants	31
2.5	Transmission and multiple voltage levels and transformers	34
2.6	Distribution of power	35
2.7	Distribution boards	43
2.8	The typical electrical power system	44
2.9	Utilization	45
2.10	Power, power demand and tariff	46
2.11	AC power and power factor correction	47
2.12	Summary	49
3	Electricity and Electrical Heating	51
3.1	Electricity as an energy carrier	51
3.2	Fundamentals of energy	51
3.3	Lighting	52
3.4	Heating and electrical heating	53
3.5	Mechanical drive/motion and transportation	60
3.6	Common examples of appliances	61
3.7	Summary	62

Technology Training that Works

4	Electricity, Light and Transportation	63
4.1	Lighting	63
4.2	Sources of light and their merits	65
4.3	Basic lighting terms	74
4.4	Electrical energy to mechanical energy	77
4.5	Control of electrical motors	81
4.6	Summary	84
5	Electrical Faults	85
5.1	Overview	85
5.2	Importance of insulation in electrical safety	87
5.3	Need for protection	90
5.4	Role of electrical insulation in safety	101
5.5	Open circuits and reasons	102
5.6	Single-phasing in three-phase motors	103
5.7	Summary	106
6	Power Electronics	107
6.1	Introduction to semi-conductors	107
6.2	Semi-conductor devices	108
6.3	Rectifiers	109
6.4	Semi-conductor motor controllers	111
6.5	Summary	114
7	Transformers and Electrical Machines	115
7.1	Electromagnetic generators – the relationship between electricity and magnetism	115
7.2	Transformers	120
7.3	Types of transformers	121
7.4	Construction of transformers	123
7.5	Efficiency of transformers and losses	131
7.6	Common problems and maintenance of transformers	133
7.7	Dry transformers	133
7.8	Uses of transformers	134
7.9	Electrical machines	134
7.10	DC motors	135
7.11	AC motors	139
7.12	Summary	147
8	Working on Electrical Circuits	149
8.1	Introduction	149
8.2	Work on live systems, close to live systems	151
8.3	Troubleshooting of electrical circuits	153
8.4	Working when the electricity is switched off	154
8.5	Lock out and tag out circuits and procedures	155
8.6	Checking that a circuit is dead	156

Technology Training that Works

8.7	Voltmeter tester	157
8.8	Instruments used for troubleshooting	158
8.9	Summary	168
<hr/>		
9	Earthing	169
<hr/>		
9.1	Introduction	169
9.2	Need for earthing	169
9.3	System earthing	170
9.4	Protective earthing	174
9.5	Earth conductors and electrodes	175
9.6	Lightning protection	183
9.7	Bonding of earthing system	186
9.8	Summary	187
<hr/>		
10	Electrical Safety	189
<hr/>		
10.1	Introduction	189
10.2	Shock hazard	191
10.3	Electrical hazard: arc flash	196
10.4	Personal protective equipment	198
10.5	How to control electrical hazards	201
10.6	First aid for electrical shock victims	205
10.7	Government legislations	207
10.8	Codes of practice	207
10.9	Summary	209
