# Practical Earthing of Utility and Industrial Distribution Systems

---

## Table of Contents

---

<b>1</b>	<b>Overview</b>	<b>1</b>
1.1	Introduction	2
1.2	Basics of grounding	2
1.3	Bonding	5
1.4	Ground electrodes	5
1.5	Grounding of electrical substations-objective	8
1.6	Static charges and the need for grounding	8
1.7	Lightning and its effects on electrical systems	10
1.8	Surge Protection	10
1.9	Noise mitigation	12
1.10	Importance of grounding codes	13
1.11	Summary	14
<b>2</b>	<b>Power supply system grounding</b>	<b>15</b>
2.1	Introduction	15
2.2	Ungrounded systems	18
2.3	Solidly grounded systems	21
2.4	Impedance grounding using neutral reactor	21
2.5	Resonant grounding using tuned reactor	22
2.6	Impedance grounding through neutral resistance	23
2.7	Point of grounding	24
2.8	Other challenges	28
2.9	Summary	28

<b>3</b>	<b>Protective grounding</b>	<b>29</b>
3.1	Introduction	29
3.2	Shock hazard	30
3.3	Role of protective grounding	36
3.4	Indirect contact hazard-Equipment classes	40
3.5	Equipotential bonding for safety against indirect contact	42
3.6	Use of protective equipment	44
3.7	Thermal capability	45
3.8	Touch Potential during ground faults	46
3.9	Induced voltage problem	47
3.10	Mitigation by multiple ground connection	48
3.11	Mitigation by reduction of conductor spacing	49
3.12	EMI suppression	49
3.13	Metal enclosures for grounding conductors	50
3.14	Grounding connections for surge protection equipment	51
3.15	Sensing of ground faults and protection	52
3.16	Supply classifications as per IEE Wiring regulations	53
3.17	More on TN-C-S systems	58
3.18	Installations where use of TN-C-S system is prohibited	59
3.19	Summary	61
<b>4</b>	<b>Ground electrode systems</b>	<b>62</b>
4.1	Introduction	62
4.2	Soil resistance	63
4.3	Measurement of soil resistivity	66
4.4	Interpretation of resistivity results	70
4.5	Resistance of a single rod electrode	71
4.6	Resistance distribution in soil	73
4.7	Use of multiple ground rods in parallel	74
4.8	Current carrying capacity of an electrode	75
4.9	Ground electrode recommendations	76
4.10	Measurement of ground resistance of an electrode	81
4.11	Measurement of electrode resistance (SA Standards)	82
4.12	Chemical Electrodes	88
4.13	Concrete encased electrodes	91
4.14	Corrosion problems in electrical grounding systems	94
4.15	Maintenance of grounding system	94

4.16	Summary	95
<b>5</b>	<b>Grounding design of electrical substations</b>	<b>96</b>
5.1	Introduction	97
5.2	System grounding practices for different voltages	97
5.3	Design approach-Basics	98
5.4	Ground fault current	99
5.5	Voltage of HV substation grounding system during faults	100
5.6	Grounding of MV/LV electrical installations	102
5.7	Design of grounding grid for an HV outdoor substation	108
5.8	Soil resistivity variations using 2-layer model	115
5.9	Transferred potential	115
5.10	Points in the substation for special attention	117
5.11	GIS equipment	118
5.12	Substations feeding to DC transmission systems	120
5.13	Steps for ensuring effective substation grounding	121
5.14	Summary	126
<b>6</b>	<b>Grounding for static charge protection</b>	<b>128</b>
6.1	Introduction	128
6.2	What is static electricity?	129
6.3	Generation of charge	129
6.4	Some common examples of static build up	130
6.5	Energy of spark and its ignition capability	132
6.6	Dangers of static electricity buildup	132
6.7	Control of static electricity	132
6.8	Assessment of static risks and planning for prevention	135
6.9	Summary	135
<b>7</b>	<b>Role of grounding in lightning protection</b>	<b>137</b>
7.1	Introduction	137
7.2	Lightning physics	138
7.3	Incidence of lightning in various geographical areas	142
7.4	Probability of lightning strike	149
7.5	Method of lightning protection	150
7.6	Planning for lightning protection	157
7.7	Lightning risk assessment	158
7.8	Improved lightning prediction models	159

7.9	Effect of lightning strike on electrical lines	163
7.10	Summary	166

---

<b>8</b>	<b>Surges and surge protection</b>	<b>168</b>
----------	------------------------------------	------------

---

8.1	Introduction	168
8.2	Surges, their causes and mitigation	169
8.3	Surges find their way into electrical circuits	171
8.4	Bonding of grounding systems as a means of surge mitigation	174
8.5	Basic principle of surge protection	177
8.6	Surge Protection Devices	179
8.7	Graded Surge protection	183
8.8	Selection criteria of surge protection devices	189
8.9	Positioning and Selection of lightning/surge arrestor	190
8.10	A practical view of surge protection for sensitive equipment	193
8.11	Other ways of mitigation of surges	197
8.12	Codes on surge protection	201
8.13	Surge protection of sensitive circuits	203
8.14	Hybrid SPDs for signal applications	203
8.15	Protection of sensitive devices	205
8.16	Protection of telemetry Systems	206
8.17	Protection of Data Communication systems	206
8.18	Summary	208

---

<b>9</b>	<b>Electrical noise and mitigation</b>	<b>209</b>
----------	--	------------

---

9.1	Introduction	209
9.2	Definition of electrical noise	210
9.3	How are sensitive circuits affected by noise?	213
9.4	Time and frequency domain representation of noise	215
9.5	Categories of noise	219
9.6	Noise from nearby electrical equipment	220
9.7	Ground Loop as a source of noise	220
9.8	Control of noise in signal cables	223
9.9	Electrostatic or capacitive coupling	225
9.10	Importance of grounding in noise control	232
9.11	Zero signal reference grid and signal transport ground plane	234
9.12	Static UPS configurations	238
9.13	Typical solid state UPS systems	238
9.14	Grounding recommendations for different UPS configurations	241
